### **CURRENT MARKET DIRECTION: UPTREND**

**Tuesday's Market:** The S&P500 rose to a **new all-time high**, then reversed after lunch, pulling back to close near the low of the day's range but still above the prior day.

That heavy selling in the second half of the day shows **distribution (selling)**. And when that selling shows up near the top of a runup, the day is a "stalling distribution day" even if the day ends slightly up from the day before.

Taking profits at all-time highs, whether in individual stocks or a major index, is not uncommon. Here are possible price-volume profiles that could occur next:

- The **S&P500 could continue to break through to new highs**.
  - **Strong volume** would indicate strength in the rise.
  - **Lesser volume** would indicate uncertainty and only mixed support.
- The **S&P500 could pull back as profits are taken at this new high**.
  - **Initial higher volume** would not scare me if the volume gets lighter in a few days.
  - **Continued heavy volume on down days could warn that a top may be in the making!**

#### **THE ARMCHAIR INVESTOR QUESTION:**

**"Now that the S&P500 index broke through its prior high, will it:**

- **Blast through** to new highs?
- **Stall** for a minor sell-off?
- Continue to **add distribution days** warning of a **market top?**

When will it be joined by **a Nasdaq new high?**

**Did you miss the huge returns of Bit Coin?** I did! But I'm not going to miss the next one. I reveal my **next hot industry group** in the FULL newsletter in the section FOR INVESTOR IN INDIVIDUAL STOCKS (near the end of the newsletter).

## DAILY MARKET ACTION

8/21/18	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 4/10/2018 UPTREND SIGNAL
Nasdaq	7,859.17	+0.5%	+4.2%	-14.0%	Minor accumulation	+11.4%
S&P500	2,862.87	+0.2%	NYSE Volume		Stalling distribution	+8.3%
NYSE	12,996.53	+0.2%	+14.7%	-5.0%	Minor accumulation	+3.9%
DJIA	25,288.29	+0.3%			Minor accumulation	+4.2%

Note: I use the volume from the Investors.com web site for the NYSE chart (not the preliminary numbers shown on their home page. The numbers above reflect the larger volume of trade in the NYSE stocks including the trading on other exchanges and is, therefore, a better representation of the full trading on those stocks.

The major indexes have not had exciting days recently, but I am excited about this market! **Both indexes are close to breaking to new highs!**

### PRIOR NOTES THAT ARE STILL RELEVANT:

There are three likely options of what will happen as those all-time highs are met:

1. The market will have a period of minor profit taken (selling) to preserve past gains – a protective move, common in uncertain times. Or
2. The market will burst through the prior highs and keep going.
3. Number 1 and 2 may happen in sequence: first #1 then breakout through to new highs and a continued uptrend.

**Last Friday's distribution day points at the first option.** But, this week's earnings reports, economic news and political "shifts" may provide fuel to the second option. I expect the third, combined market action to be most likely. As you plan your strategy for next week, remember two points:

- **The market is in an Uptrend** (not even "Uptrend under Pressure"). It is not showing significant weakness.
- **The market continues in the direction it is going (which is Uptrend) until it doesn't.**

### I see one more factor affecting this market:

**THE SUMMER SLOWDOWN.** Trading Volume typically slows down as traders take some vacation time. Although many of our Texas schools are back in session, early September school start dates are not uncommon.

## **TREND-FOLLOWING STRATEGY**

**Hold your TREND-FOLLOWING ETFs** The QQQ, QLD and TQQQ ETFs have earned attractive returns since the last market upturn on 4/11 as shown in the Trend-Following ETFs below.

***How's your trend-following doing? Are you following the market's signals and earning these nice returns?***

TREND ETFs	ARMCHAIR INVESTOR TREND-FOLLOWING RETURNS for Current Uptrend			
8/21/18	Opening Price on 4/11/2018	Today's Price	ETF % Change Today	GAIN OR LOSS SINCE 4/10/2018 UPTREND SIGNAL
QQQ (1x)	160.20	180.33	+0.4%	+12.6%
QLD (2x)	76.06	94.97	+0.7%	+24.9%
TQQQ (3x)	47.53	65.44	+1.1%	+37.7%

The ETF QQQ is designed to move WITH the largest 100 stocks on the Nasdaq. QLD is designed to double the price move of the QQ. The TQQQ is a more volatile Visit Proshares.com for more information.

**THE ARMCHAIR INVESTOR TREND-FOLLOWING strategy** is SIMPLE and FAST to execute:

- **Be in the market when it is going up.**
- **Be out or (or short) the market when it is going down.**
- **Protect yourself with an 8% stop.**

***You could have earned the above ARMCHAIR INVESTOR TREND-FOLLOWING RETURNS in less than 5 minutes a day.***

Follow these Armchair Investor Trend-following Strategy moves:

- **When the Market direction moves into UPTREND:**
  - Buy an UPTREND ETF (and sell any DOWNTREND ETF you own)
- **When the Market direction moves into DOWNTREND:**
  - Buy a DOWNTREND ETF (and sell any UPTREND ETF you own)
- **Repeat!!**

**Are You a Trend Trader?** Here is the current action:

**HOLD your trend-following ETF (such as QQQ, QLD, and TQQQ)!**

**Remember: It is hard for the big money (funds, banks and money managers) to hide their actions.** But if you follow this newsletter, you will also learn to interpret their stealth moves and take appropriate action like holding during the recent 3-week dip so you immediately capture the recovery gains as we did last week.

## **DO YOU INVEST IN INDIVIDUAL STOCKS?**

Always consider taking some profit if significant distribution is showing up for your **individual stocks**. However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be green
- If the factor leans toward the **Downtrend**, that box will be orange or red

### **MARKET IN UPTREND**

**THE STRENGTH OF THIS UPTREND CAN BE SEEN IN THE PERFORMANCE OF ITS BEST STOCKS.**

**Earnings announcements continue to launch top stocks higher.**

**Do you read the Investors.com "New Highs" column each day?**

It's one of my "must read" daily columns listed under the Stock Lists tab. From Wednesday's column, this stock is worth a review right now:

- **Automated Data Processing (ADP) broke through its double bottom buy price of 140.49 Tuesday on strong earnings, still in the buy zone as of 8/21.**
- **THE MOST INTERESTING STOCK OF THE DAY: Canopy Growth CGC** a producer of medical and recreational marijuana products. It is not expected to be profitable until sometime next year.

>>>> **Did you miss the big wins in Bit Coin? I did!** I thought, "What a silly idea – unregulated "currency" – like playing a rigged game in Vegas. Maybe all that was true, but I certainly missed a lot of easy gains.

**NOW I believe marijuana will be the next Bit Coin winner. It makes me kind of woozy just to imagine how big this market is!** And legalization of all levels (medical to recreational) is happening, no matter what your opinion! Which will win and which will, (excuse me, I have to say it) go up in smoke. I suspect there will be an eventual consolidation of the better companies. But right now, playing a little in some publicly traded stocks could work. I suspect many will languish. **Marijuana ETFs might be a solution.**

I suggest you invest small amounts and nothing more than you can afford to lose. Put those stops in, too. **If you have insights into this industry group, I would like to have a conversation with you! Call me!**

Charlotte 214-995-6702

**Remember Portfolio Lesson #2: Avoid Over-Diversification – Even though excessive diversification would have helped you on Thursday, it hurts your returns most of the time.**

I usually own a max of 5 stocks (occasionally up to 7). Do these low numbers represent “conservative” diversification? Many brokers want you do have 20 or more stocks in your portfolio. The high number protects them. If one stock dropped 19% as FB did Thursday, your 20 stock portfolios would have lost only 0.5% from that one stock.

And **the reverse happens when you have a big winner – the winnings are watered down** as well. I find 5 diversified stocks a good middle ground – I still get nice impact from gains while protection from too much exposure to losses in one stock (and using well-placed stops.)

***In William O’Neil’s work, he says, ‘If you could buy the best seven stocks, why would you want to water down your returns by buying the next 10 or 20?’***

**Conclusion: Over-diversification (more than 7 stocks) tends to:**

- **Reduce your returns and**
- **Takes more time to manage.**

You can find many high performing stocks by **reviewing the IBD 50 stocks shown in the weekend Investor’s Business Daily newspaper** and on the investors.com web site. I am a visual analyst and prefer using the newspaper. It has more complete, key data with charts for each of the 50 stocks than my broker.

One source of stocks that are showing strong upward moves is the **Weekly Winners and Losers** list of the ten IBD 50 stocks with biggest weekly upward price movement. This list does show the ten IBD50 stocks with the biggest losses but I am not interested in those stocks until the market goes into a Downtrend.

**Will the market continue to new highs? My guess, “YES!”**

**REMEMBER: THE MARKET CONTINUES IN THE DIRECTION IT IS GOING, UNTIL IT DOESN’T.**

**MARKET IN UPTREND**

Every day at [www.investors.com](http://www.investors.com), Investor's Business Daily has great ideas (for subscribers). Besides the IBD50 list, I always look at the:

**IBD STOCK OF THE DAY** – Read the full IBD "Stock of the Day" articles (through your IBD subscription)

Note: Friday, 7/13 ended our following of the IBD "Stocks of the Week."

I have a new investing mantra I hope you'll use as a reminder of how to manage your portfolio:

**Buy the BEST**  
**Watch the NEST**  
**Visit the REST**

- **Buy the BEST** – self-explanatory: Do not compromise your stock picking or your signal to buy.
- **Watch the NEST** – Once I own a stock, my relationship to it completely changes. It's "my" stock now. Take care of your chicks. Feed them as they grow (even add more). But if you discover your cute cuddly chick is weak or fighting you, it may be time to pass them on to a new caretaker.
- **Visit the REST** – What about all those other stocks you identified as "almost" ready buy? A secret I don't talk about: I have two watch lists. One I look at daily with stocks very near buy points or waiting for EPS announcement. And a second weekly list of stocks that are getting close to a buy signal.

*If you take a MarketSmith trial, please mention the Dallas and Fort Worth Meetup leader (Charlotte Hudgin) as your source. This helps us get occasional guest speakers from IBD and access to MarketSmith! Thank you.*

**I AM BUYING INDIVIDUAL STOCKS** which are breaking out of good bases with high volume on the breakout day. Volume is the factor which is hard to find right now but I can wait! With the current weakness in the market, I am buying smaller first bites. If you are having trouble finding enough good stocks to buy, consider adding the QQQ or another Uptrend-Index ETF. This is one place I put some of my money when I can't find the right stock at a buy point.

**REMEMBER:**  
**YOU ARE NOT SMARTER THAN THE MARKET**

**THE MARKET AND STOCKS CONTINUE IN THE DIRECTION THEY ARE GOING..... UNTIL THEY DON'T.**

**PROTECT YOUR PORTFOLIO WITH AN 8% STOP**

**CHOOSE YOUR STOP & LIVE BY IT – NO EXCUSES!**

And you don't have to wait for your stock to fall to the stop. A concentration of distribution days is always a reason for me to get out wherever it happens!

### **What to do now:**

- **WATCH YOUR INVESTMENTS CLOSELY:** Add positions in top stocks at buy or add-on points. Sell stalling and falling stocks quickly. Do a quick **review of each stock you own every night**. Look for strength and weakness signals in the price-volume action, especially watching for distribution (signs of institutional selling)
- **DON'T LOSE YOUR GAINS:** Sell any stock that is showing a concentration of distribution days. I sell more quickly in a Downtrend

## EXPLANATION OF TERMS FOR THE

### MARKET ACTION OVER THE LAST 20 DAYS

*Four weeks of price and volume action reveal much about the direction of the market and the strength of that movement.*

		Price		Volume	
<b>Healthy Uptrend</b> Price-Volume Movement	Strong Action	Up	↑	↑	Up
	Weaker Action	Down	↓	↓	Down
<b>Healthy Downtrend</b> Price-Volume- Movement	Strong Action	Down	↓	↑	Up
	Weaker Action	Up	↑	↓	Down

The chart below identifies the **market direction** indicated by the Nasdaq's price and volume action for the last 20 days at two levels of significance.

#### **ACCUMULATION/DISTRIBUTION COLUMN - TELLS YOU WHERE THE BIG MONEY IS GOING**

The listing includes: the date, Nasdaq closing price and percent change of the Nasdaq price and volume.

- The next column identifies days that were **Major Accumulation** (serious UPTREND indicator) or **Major Distribution** (serious Downtrend indicator) using the 1% minimum rise or fall with higher volume.
- **Minor accumulation** and **minor distribution days** are also identified – days that moved 0.2% or more but less than 1%.

#### **"CONSISTENT WITH" – THE SUBTLE, BUT TELLING MOVES**

The last column is an UPTREND /Downtrend indicator.

Think of a healthy Uptrend. It will have many days where the index rises with increased volume.

But even in the most robust Uptrend, \* not every day will be up. In any Uptrend, there will be some down days. If they have higher volume, then the day becomes a distribution day but if the volume is lighter (as frequently happens in an Uptrend), then the down day is NOT a distribution day. In fact, a drop on lighter volume says they market is NOT selling off heavily – good news and consistent with the Uptrend.

Using the Healthy UPTREND/Downtrend price and volume movement listed above.

- For example, if the Nasdaq closing price rose 0.7% and the volume rose 2% (up and up), that movement is "consistent with" the price-volume action of a Healthy UPTREND.
- If the price drops 0.5% and the volume rises 1.2% (down and up), that movement is "consistent with" the price-volume action of a Healthy Downtrend as indicated in the table above.
- Any index change less than + or – 0.2% or volume change less than + or – 1% has no "consistent with" notation. Price and volume movements that small is not strong enough to tell us about the market movement.

## EXAMPLE OF ACCUMULATION AND DISTRIBUTION WITH EXPANDED EXPLANATION OF TERMS:

A **Major Accumulation Day**: Price RISES 1.0% or more and higher Volume than the day before  
A **Minor accumulation Day**: Price RISES 0.2% or more and Volume is strong (either higher volume or is well-above average volume)

A **Major Distribution Day**: Price FALLS 1.0% or more and higher Volume than the day before.  
A **Minor distribution Day**: Price FALLS 0.2% or more, Volume is strong (either higher volume or is well-above average volume)

A **Stalling minor distribution Day**: Only in an up-trending index or stock, price is FLAT or DOWN slightly compared to the day before, closing in the bottom half of the day's range and volume is heavier or about equal to the day before or strong compared to the past market. It's the price closing low in the day's range after an uptrend that is the key for this designation. Price close to flat and higher or consistent volume indicates the big money (institutions: mutual funds, banks, etc.) are gently selling, trying to sneak out so you won't notice.

\*\* The "CURRENT TREND" column calculates how far each index has moved in the current trend assuming you purchased the index (which is not buyable) at the opening price on the day after the trend change signal.

- **When this column is GREEN, the index has moved in the direction of the market trend.**
- **HOWEVER, when this column is RED, the index change has fallen into negative territory (which could be a rise during a Downtrend)**

An **ACCUMULATION** day points at heavy buying by institutional money managers - the mutual funds, pension funds, banks, etc.  
A **DISTRIBUTION** day points at heavy selling by institutional money managers.
