### **Section 1 – RIDE THE MARKET IN THE DIRECTION IT'S GOING**

#### **CURRENT MARKET DIRECTION: UPTREND**

*Here is the most important stock market insider secret:*

*The **SINGLE BIGGEST PREDICTOR** of **INVESTING SUCCESS** is  
TRADING WITH THE MARKET TREND!*

*The purpose of this newsletter is to equip you with **THE MARKET TREND** so your investing can take advantage of this Key indicator and earn well-above average returns. This system is based on:*

- **Being IN the market when the market is rising and**
- **Being OUT (or short) when the market is falling.**

It sounds simple. It's not!

Too many individual investors are too scared to get in at the beginning of a new Uptrend and too uncertain to stay in a strong Trend. Let's start with how much you would have earned if you had invested in the current trend:

**CURRENT UPTREND:** The current Uptrend began on 1/4/ 2019. If you had purchased a market-based Uptrend ETF such as those below, you would have earned 7% to 22% as of close on Thursday:

Uptrend ETFs	Armchair Investor Trend-following Returns for Current Uptrend			
1/31/19	Opening Price on 1/7/2019	Today's Closing Price	ETF % Change Today	Gain or Loss Since 1/4/19 Uptrend Signal
QQQ (1x)	156.54	168.16	+1.5%	+7.4%
QLD (2x)	68.98	79.17	+2.9%	+14.8%
TQQQ (3x)	38.47	47.01	+4.4%	+22.2%

The ETF QQQ is designed to move WITH the largest 100 stocks on the Nasdaq. QLD is designed to double the price move of the QQQ. The TQQQ is a more volatile Visit Proshares.com for more information.

**The Uptrend signal is right about 75% of the time!**

## HOW DO I CAPTURE THOSE GREAT GAINS? It's as easy as 1- 2- 3!

### **STEP 1: In an Uptrend, buy a Nasdaq ETF (listed below)**

The market trend-following ETFs are up 3.2%, 6.0% and 8.9% since the last Uptrend signal on January 7. Are you getting your share? (See the ETF tracking table below.)

If you had simply **bought a Nasdaq100 ETF** the morning after the market direction changed to Uptrend, you would have made these returns:

Note: Because the market direction is called **after the close of the day**, the earliest opportunity to invest in the QQQ (or double or triple ETF) is at the next morning's open. So that is the price we use to calculate the gains you would have earned if just followed these rules.

**STEP 2: After you receive a confirmation of your ETF purchase, immediately place an 8% stop loss order** to limit your losses in case of a quick market reversal.

**STEP 3: SELL THE UPTREND ETF WHEN THE MARKET DIAGNOSIS CHANGES TO DOWNTREND.** You might enjoy the rising markets, but all markets eventually change direction. Watch this newsletter nightly to catch the signal at the top!

Here is the summary question: **HAVE YOU MADE MONEY in this market? YES!** if you followed the simple rules in this MARKET TREND newsletter. Look at the right "Gains or Loss" column above. **Wow!**

**TUESDAY'S MARKET:** Nasdaq rose 1.2% with higher volume, the S&P500 rose 0.9%. The result? Another big Accumulation day:

DAILY MARKET ACTION						
1/31/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 1/4/2018 UPTREND SIGNAL
Nasdaq	7,281.74	+1.2%	+2.46%	+9.4%	Major Accumulation	+7.8%
S&P500	2,704.10	+0.9%	NYSE Volume		Minor Accumulation	+5.7%
DJIA	24,999.67	-0.1%	+27.3%	+22.7%	Neither	+6.5%

A Major Accumulation Day: Price RISES 1.0% or more with higher Volume than the day before

## THE ARMCHAIR INVESTOR TREND-FOLLOWING

strategy is SIMPLE and FAST to execute:

- **Be IN** the market when it's going up.
- **Be OUT** of (or short) the market when it's going down.  
*ADDITIONAL NOTE: If the market is too volatile, or makes you so crazy you can't sleep at night, consider moving to CASH.*
- Protect yourself with an 8% stop.

**The ARMCHAIR INVESTOR TREND-FOLLOWING STRATEGY is designed to allow you to capture much of the market's gains in less than 5 minutes a day.**

Follow these Armchair Investor Trend-following Strategy moves:

1. **When the Market direction moves into UPTREND:**
  - Buy an UPTREND ETF (and sell any INVERSE ETFs you own)
2. **When the Market direction moves into DOWNTREND:**
  - Sell any Uptrend ETF such as QQQ, QLD or TQQQ
  - Buy an **INVERSE ETF** or wait in CASH IF YOU PREFER
3. Repeat !!
4. >>>> In times of UNCERTAINTY, a move to CASH may be appropriate.

## WHY DOES THIS STRATEGY WORK SO WELL?

**It is hard for the big money (funds, banks and money managers) to hide their actions.** But if you follow this newsletter, you will also learn to interpret their stealth moves and take advantage of that knowledge.

## **DO YOU INVEST IN INDIVIDUAL STOCKS?**

**Always consider taking some profit if significant distribution is showing up for your individual stocks.** However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**

## **FOR INVESTORS IN INDIVIDUAL STOCKS**

### **BEST INVESTING ADVICE: WATCH YOUR NEST!**

Many people find identifying great stocks that are breaking out of bases is easy!

The real surprise comes when they find out it is harder to decide when to sell a stock to take a profit or to minimize losses. Sometimes they “get busy” and forget to review their overgrown portfolios. Waiting can cost them much of their precious gains.

I have an investing mantra I hope you’ll use as a reminder of how to manage your portfolio. I use these 3 steps:

### **BUY the BEST**

### **WATCH the NEST**

### **VISIT the REST**

- **BUY the BEST** – self-explanatory: Do not compromise your stock buying rules. Only buy the best stocks in an UPTRENDing market close to a buy point.
- **WATCH the NEST** – Once I own a stock, my relationship to it completely changes. It’s “my” nest egg now. Take care of your chicks. Feed them as they grow (even add more shares). But if you discover your cute cuddly chick is fighting you, it may be time to pass it on to a new caretaker.
- **VISIT the REST** – What about all those other stocks you identified as “almost” ready buy? A secret I haven’t talked about: I have two watch lists! One I look at daily with stocks very near buy points or waiting for EPS announcement. And a second weekly list of stocks that are getting close to a buy signal.

### **WHERE DO I FIND IDEAS FOR GREAT STOCKS TO ADD TO MY PORTFOLIO?**

There are a growing number of strong stocks that are have broken out of well-formed bases or are closing in on buy points RIGHT NOW. I use Investors.com articles and stock lists (the IBD50, Sector Leaders, Stock

## EXPLANATION OF TERMS FOR THE

### MARKET ACTION OVER THE LAST 20 DAYS

*Four weeks of price and volume action reveal much about the direction of the market and the strength of that movement.*

		Price		Volume	
Healthy <b>Uptrend</b> Price-Volume Movement	Strong Action	Up	↑	↑	Up
	Weaker Action	Down	↓	↓	Down
Healthy <b>Downtrend</b> Price-Volume- Movement	Strong Action	Down	↓	↑	Up
	Weaker Action	Up	↑	↓	Down

The chart below identifies the **market direction** indicated by the Nasdaq's price and volume action for the last 20 days at two levels of significance.

#### **ACCUMULATION/DISTRIBUTION COLUMN - TELLS YOU WHERE THE BIG MONEY IS GOING**

The listing includes: the date, Nasdaq closing price and percent change of the Nasdaq price and volume.

- The next column identifies days that were **Major Accumulation** (serious UPTREND indicator) or **Major Distribution** (serious Downtrend indicator) using the 1% minimum rise or fall with higher volume.
- **Minor accumulation** and **minor distribution days** are also identified – days that moved 0.2% or more but less than 1%.

#### **“CONSISTENT WITH”– THE SUBTLE, BUT TELLING MOVES**

The last column is an UPTREND /Downtrend indicator.

Think of a healthy Uptrend. It will have many days where the index rises with increased volume.

But even in the most robust Uptrend, \* not every day will be up. In any Uptrend, there will be some down days. If they have higher volume, then the day becomes a distribution day but if the volume is lighter (as frequently happens in an Uptrend), then the down day is NOT a distribution day. In fact, a drop on lighter 4747.62 volume says they market is NOT selling off heavily – good news and consistent with the Uptrend.

Using the Healthy UPTREND/Downtrend price and volume movement listed above.

- For example, if the Nasdaq closing price rose 0.7% and the volume rose 2% (up and up), that movement is “consistent with” the price-volume action of a Healthy UPTREND.
- If the price drops 0.5% and the volume rises 1.2% (down and up), that movement is “consistent with” the price-volume action of a Healthy Downtrend as indicated in the table above.
- Any index changes less than + or – 0.2% or volume change less than + or – 1% has no “consistent with” notation. Price and volume movements that small is not strong enough to tell us about the market movement.

## EXAMPLE OF ACCUMULATION AND DISTRIBUTION WITH EXPANDED EXPLANATION OF TERMS:

### SAMPLE Market Action with explanation

2/5/16	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg	Accumulation or Distribution Day?	Current Trend: DOWNTREND Began 1/4/2015
Index	4363.14	-3.2%	+13.8%	+21.8%	Major Distribution	+11.3%
S&P500	1879.92	-1.9%	NYSE Volume		Neither	+6.6%
NYSE	9,390.33	-1.5%	-5.3%	+15.0%	Neither	+6.2%
DJIA	16,204.62	-1.3%			Neither	+5.5%

A **Major Accumulation Day**: Price RISES 1.0% or more and higher Volume than the day before

A **Minor accumulation Day**: Price RISES 0.2% or more and Volume is strong (either higher volume or is well-above average volume)

A **Major Distribution Day**: Price FALLS 1.0% or more and higher Volume than the day before.

A **Minor distribution Day**: Price FALLS 0.2% or more, Volume is strong (either higher volume or is well-above average volume)

A **Stalling minor distribution Day**: Only in an up-trending index or stock, price is FLAT or DOWN slightly compared to the day before, closing in the bottom half of the day's range and volume is heavier or about equal to the day before or strong compared to the past market. It's the price closing low in the day's range after an uptrend that is the key for this designation. Price close to flat and higher or consistent volume indicates the big money (institutions: mutual funds, banks, etc.) are gently selling, trying to sneak out so you won't notice.

\*\* The "CURRENT TREND" column calculates how far each index has moved in the current trend assuming you purchased the index (which is not buyable) at the opening price on the day after the trend change signal.

• **When this column is GREEN, the index has moved in the direction of the market trend.**

• **HOWEVER, when this column is RED, the index change has fallen into negative territory (which could be a rise during a Downtrend)**

An **ACCUMULATION** day points at heavy buying by institutional money managers - the mutual funds, pension funds, banks, etc.

A **DISTRIBUTION** day points at heavy selling by institutional money managers.
