

ARMCHAIR INVESTOR **TREND-FOLLOWING STRATEGY***

(*For that part of your portfolio which is invested in a **market-tracking ETF** like the **QQQ**.)

The 2017 ARMCHAIR INVESTOR classes schedule is:

Monday 7:00 – 9:00 p.m. Barnes & Noble at Royal & Preston (northeast corner), Dallas
Tuesdays 4:00 – 6:00 p.m. Barnes & Noble at Royal & Preston (northeast corner), Dallas
Wednesday 10:00 am – noon, Barnes & Noble, on Beltline just east of Montfort, Addison

Visit a class as my guest. Call or text Charlotte a day before the class (or more) at 214-995-6702.

THIS WEEK: The Nasdaq has done it! Finally closed above 5500.
And the Dow Jones Industrial Average (DJIA) is just below 20,000.

- The Nasdaq was UP 1.6% for the week with volume UP 36% in the first 5-day week in three weeks and as Wall Street got back to work after the holidays.
- The S&P500 was UP 1.2% with volume UP 55%.

If you have a moment, download the full newsletter (see below). Look at the **MARKET FACTORS, COUNTS AND RATINGS** table. There is **GREEN** everywhere (factors consistent with an Uptrend).
Now smile! 😊

Exceptions: Friday was a neutral day (with lower volume) and the distribution count is an annoying 5 days in the last 25 – but they are mostly small down days.

THE LESSON: BOTH INDEXES' ARE IN OR NEAR "NEW HIGH" TERRITORY.

BACKGROUND: It is common for stocks and indexes to stop right below big whole numbers like 40, 100, or 2000.

- In this market, the Nasdaq has spent a month coming close to 5500 and backing down from it. Friday, the Nasdaq closed above that 5500 for the first time ever! Very positive news!
- The DJIA has also spent 4 weeks flirting with the extreme ordinal 20,000. Friday was its closest day end of 19,966.40 – just 0.18% off.

Both of these moves are positive: The new year is NOT bringing in gloom and doom about Trump reforms causing a beginning of year sell-off of the market

FRIDAY:

- The Nasdaq was UP 0.6% with lower volume.
- The S&P500 was UP 0.4% with lower volume.

The Nasdaq distribution count dropped to 5 distribution days. (IBD says 6 d-days – see 12/15 note). The S&P500 distribution count is 4 distribution days, still nothing to get scared about. Attention is still focused on the Nasdaq's higher count.

NOTE: I have updated the recent highs of the “HOW CLOSE ARE THE INDICES TO ALL-TIME HIGHS?” to recent highs (see table below)

It is exciting to see the indexes breaking through all-time highs and is an indication of **current optimism about the future of the market.**

What to do now: Hold the QQQ and add individual stocks if that is part of your investing strategy.

- I hold my full QQQ position
- You can also consider making an investment in the triple QQQ ETF (TQQQ).
 - The TQQQ is a riskier position that rises about 2 ½ to 3 times the QQQ's rise.
 - BUT BEWARE – the TQQQ also falls at 2 ½ to 3 times the drops in the QQQ.

The standard mathematical requirements for distribution days are shown above. And there are additional types of distribution days that show substantial selling such as happened on Monday June 27, 2016, when the market fell 2.4%, closed near the bottom of the day's price range but had lighter volume. The volume was still a strong 31% above average. In total, the day was heavy selling and labeled distribution (6/27/2016 was the second day of the market's heavy selling response to England's vote to leave the European Union.)</p> <p>CURRENT TREND: There are two trends (UPTREND and DOWNTREND). But because most tops are rounded and happen over a couple of weeks or more, we find it useful to modify the Uptrend into "Uptrend under PRESSURE" when the distribution count gets uncomfortably high.</p> <p>For more detailed explanation of Accumulation and Distribution days, please jump to the end of the FULL newsletter which can be downloaded at www.ArmchairInvestor.com.</p>

MARKET DIRECTION ADDITIONAL COMMENTS

More detailed comments on market direction and technical analysis for individual stocks

FRIDAY : If you are looking for an indication of this market coming back to uptrend life, look at the **shift in Accumulation/Distribution in just the last week.**

The total percent of A and B rated stocks rose in one week from 55% (an upside indicator) to 65% - that's almost 2/3 of the stocks (over \$5) under strong accumulation! I can only say, "Whoppie!"

It is interesting that both leading indexes (the Nasdaq and the S&P500) plus the DJIA have Accumulation/Distribution ratings in the Bs. Over time, it is not unusual that the laggard index catch up to the leader and vice versa.

FYI: We do know that over time, **the Nasdaq has a small edge over the S&P500 and DJIA** (I'll take a 1% consistent edge if I can get it!) That higher return, plus the Nasdaq's higher volatility is why I pay more attention to the Nasdaq and its ETFs than those of the S&P500 or DJIA.

Note: I can get a bigger return using the Nasdaq's increased volatility (bigger gains during rising periods and bigger drops during falling periods) in my swing trading.

FROM YESTEREDAY'S NEWSLETTER:

In my Armchair Investor classes this week, we found a substantial list of attractive stocks ready to break out.

Good places to look for stocks to put on your watch list (or to buy tomorrow) are:

- **Stocks in the top industry groups listed in the Market page at the bottom of the daily Big Picture column. Be sure to look for industry groups that have risen fast recently over the last six weeks as shown in that table.**
- **The "Week in Review" list of top stocks with EPS and Relative Strength ratings of 85 or above updated on Thursdays and available every day on the website**
- **The IBD 50 list available every day on the website.**

BEWARE: None of these lists is a "buy it now" list. For example, Nvidia is still #1 on the IBD 50, but is down 13% from its high just 4 days ago. I am sure I will own NVDA again, but not at the moment.

Remember:
The market AND YOUR STOCKS continue in the direction they are going until they don't.

MARKET DIAGNOSIS: "UPTREND"

What to do now:

1. **WATCH YOUR INVESTMENTS CLOSELY:** Do a quick **review of each stock you own every night**. Look for strength and weakness signals in the price-volume action, especially watching for distribution (signs of institutional selling)
2. **DON'T LOSE YOUR GAINS:** **Sell any stock that is showing a concentration of distribution days**
3. If you **need cash** for a hot new breakout, consider selling a stock that was a strong buy but hasn't taken off. It might be languishing near the buy point or it might have already round tripped – risen from a good buy point and bombed back or below the buy price.

EXPLANATION OF TERMS FOR THE

MARKET ACTION OVER THE LAST 20 DAYS

Four weeks of price and volume action reveal much about the direction of the market and the strength of that movement.

		Price		Volume	
Healthy Uptrend Price-Volume Movement	Strong Action	Up	↑	↑	Up
	Weaker Action	Down	↓	↓	Down
Healthy Downtrend Price-Volume- Movement	Strong Action	Down	↓	↑	Up
	Weaker Action	Up	↑	↓	Down

The chart below identifies the **market direction** indicated by the Nasdaq's price and volume action for the last 20 days at two levels of significance.

ACCUMULATION/DISTRIBUTION COLUMN - TELLS YOU WHERE THE BIG MONEY IS GOING

The listing includes: the date, Nasdaq closing price and percent change of the Nasdaq price and volume.

- The next column identifies days that were **Major Accumulation** (serious UPTREND indicator) or **Major Distribution** (serious Downtrend indicator) using the 1% minimum rise or fall with higher volume.
- **Minor accumulation** and **minor distribution days** are also identified – days that moved 0.2% or more but less than 1%.

"CONSISTENT WITH" – THE SUBTLE, BUT TELLING MOVES

The last column is a UPTREND /Downtrend indicator.

Think of a healthy Uptrend. It will have many days where the index rises with increased volume. But even in the most robust Uptrend, * not every day will be up. In any Uptrend, there will be some down days. If they have higher volume, then the day becomes a distribution day but if the volume is lighter (as frequently happens in an Uptrend), then the down day is NOT a distribution day. In fact, a drop on lighter volume says they market is NOT selling off heavily – good news and consistent with the Uptrend.

Using the Healthy UPTREND/Downtrend price and volume movement listed above.

- For example, if the Nasdaq closing price rose 0.7% and the volume rose 2% (up and up), that movement is "consistent with" the price-volume action of a Healthy UPTREND.
- If the price drops 0.5% and the volume rises 1.2% (down and up), that movement is "consistent with" the price-volume action of a Healthy Downtrend as indicated in the table above.
- Any index change less than + or – 0.3% or volume change less than + or – 1% has no "consistent with" notation. Price and volume movements that small is not strong enough to tell us about the market movement.

Nasdaq	4363.14	-3.2%	+13.8%	+21.8%	Major Distribution	+11.3%
S&P500	1879.92	-1.9%	NYSE Volume		Neither	+6.6%
NYSE	9,390.33	-1.5%	-5.3%	+15.0%	Neither	+6.2%
DJIA	16,204.62	-1.3%			Neither	+5.5%

A **Major Accumulation Day**: Price RISES 1.0% or more and higher Volume than the day before
A **Minor accumulation Day**: Price RISES 0.2% or more and Volume is strong (either higher volume or is well-above average volume)

A **Major Distribution Day**: Price FALLS 1.0% or more and higher Volume than the day before.
A **Minor distribution Day**: Price FALLS 0.2% or more, Volume is strong (either higher volume or is well-above average volume)

A **Stalling minor distribution Day**: Only in an up-trending index or stock, price is FLAT or DOWN slightly compared to the day before, closing in the bottom half of the day's range and volume is heavier or about equal to the day before or strong compared to the past market. It's the price closing low in the day's range after an uptrend that is the key for this designation. Price close to flat and higher or consistent volume indicates the big money (institutions: mutual funds, banks, etc.) are gently selling, trying to sneak out so you won't notice.

** The "CURRENT TREND" column calculates how far each index has moved in the current trend assuming you purchased the index (which is not buyable) at the opening price on the day after the trend change signal.

- **When this column is GREEN, the index has moved in the direction of the market trend.**
- **HOWEVER, when this column is RED, the index change has fallen into negative territory (which could be a rise during a Downtrend)**

An **ACCUMULATION** day points at heavy buying by institutional money managers - the mutual funds, pension funds, banks, etc.
A **DISTRIBUTION** day points at heavy selling by institutional money managers.
