**A TREND-FOLLOWING STRATEGY\***

*\*For that part of your portfolio which is invested in a **market-tracking ETF** like **QQQ***

### **MARKET DIAGNOSIS: UPTREND**

**WEDNESDAY** Some low volume in the days between the Attempted Rally day 1 and the Follow-through day isn't unusual. The market makers are figuring out if "this is it." But after the Follow-through day, if they believe the market is only going up (e.g. "getting more expensive") they usually jump in creating frequent higher volume, up days (accumulation days).

>>>>OK – we got the Up days. But where is the commitment of volume? (nowhere so far)

Look at any of the major daily index charts (Nasdaq, S&P500, DJIA) and you will see a lot more volume on the way down to the 2/9 low than on the way up. This lack of volume is one of the reasons I'm having trouble stepping back into the market. I did buy a position in the QQQ on 2/15, the morning after the market went into Confirmed Uptrend.

The new Federal Reserve chairman's first FOMC announcement on Wednesday was not a surprise – expect slow, small rises in the Fed interest rate. Rather than the market being comforted by the "business as usual" approach to the market, the market fell anyway.

#### **NEW STOCK PURCHASES?**

Since the 2/14 Follow-through day signaling a new Uptrend, I have not found much to buy. I did buy one stock on Thursday (the day after the new Confirmed Uptrend) because I believe in William O'Neil's advice to buy something after the Follow-through signal. Owning something in a new Uptrend gets one "in" the new Uptrend (not just watching from the sidelines.)

## Daily Market Action

2/21/18	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Current Trend Gains*: UPTREND 2/14/2018
Nasdaq	7,218.23	-0.2%	+1.2%	-8.5%	Minor distribution	+0.2%
S&P500	2,701.33	-0.6%	NYSE Volume		Minor distribution	-0.4%
NYSE	12,695.53	-0.5%	+4.3%	+4.8%	Minor distribution	-0.9%
DJIA	24,797.78	-0.7%			Minor distribution	-1.0%

A Major Accumulation Day: Price RISES 1.0% or more and higher Volume than the day before  
 A Minor accumulation Day: Price RISES 0.2% or more and Volume is strong (either higher e or is well-above average volume)

**Current Trend Gains** show the gains in these indexes if you bought each at the opening price on the day after the recent trend changed.

### Do you still own individual stocks?

- Watch any stocks you still own. Sometimes, they take off (congratulations) in a new Uptrend. But sometimes, they languish as the sectors rotate elsewhere. Is it time to sell those tired stocks?

### BE SURE YOU HAVE ACTIVE STOPS ON EVERYTHING YOU OWN

#### REMEMBER:

**THE MARKET CONTINUES IN THE DIRECTION IT'S GOING UNTIL IT DOESN'T.**

## **ADDITIONAL COMMENTS FOR INVESTORS IN INDIVIDUAL STOCKS**

*More detailed comments on market direction and technical analysis for individual stocks*

### **WEDNESDAY :**

After the weekend, I hoped the market would step up to the plate – I expected it; the market is in a confirmed Uptrend!

But without volume the price rises in the last few days have no power behind them. Unless you have a really strong stock, consider building a watch list only.

Some protective strategies include:

1. Put in a stop loss order to automatically sell your stock if it dips too much.
2. Sell stocks without an 8% buffer (gain.)
3. Buy a protective put.

Please talk to your broker if you are not clear on which of these strategies is right for you. Each can be tricky to implement and yield a nasty surprise if not set up correctly.

### **YOU ARE NOT SMARTER THAN THE MARKET**

Do you remember my second lesson for every new investor?:

**THE MARKET AND STOCKS CONTINUE IN THE DIRECTION  
THEY ARE GOING..... UNTIL THEY DON'T.**

I bet a few of you are asking, “What is the first lesson?”

You might know it so well that you have integrated it your investing and forgotten it:

**PROTECT YOUR PORTFOLIO WITH AN 8% STOP**

And, yes. You may have chosen a tighter 7% or 6% stop. The most important aspect of this first rule is:

**CHOOSE YOUR STOP & LIVE BY IT – NO EXCUSES!**

And you don't have to wait for your stock to fall to the stop. A concentration of distribution is a good reason to get out wherever it happens!

---

Remember:

The market AND YOUR STOCKS continue in the direction they are going until they don't.

### **MARKET DIAGNOSIS: "UPTREND"**

What to do now:

1. **WATCH YOUR INVESTMENTS CLOSELY**: Do a quick **review of each stock you own every night**. Look for strength and weakness signals in the price-volume action, especially watching for distribution (signs of institutional selling)
2. **DON'T LOSE YOUR GAINS**: Sell any stock that is showing a concentration of distribution days. I sell more quickly in a Downtrend

## EXPLANATION OF TERMS FOR THE

### MARKET ACTION OVER THE LAST 20 DAYS

*Four weeks of price and volume action reveal much about the direction of the market and the strength of that movement.*

		Price		Volume	
Healthy <b>Uptrend</b> Price-Volume Movement	Strong Action	Up	↑	↑	Up
	Weaker Action	Down	↓	↓	Down
Healthy <b>Downtrend</b> Price-Volume- Movement	Strong Action	Down	↓	↑	Up
	Weaker Action	Up	↑	↓	Down

The chart below identifies the **market direction** indicated by the Nasdaq's price and volume action for the last 20 days at two levels of significance.

#### **ACCUMULATION/DISTRIBUTION COLUMN - TELLS YOU WHERE THE BIG MONEY IS GOING**

The listing includes: the date, Nasdaq closing price and percent change of the Nasdaq price and volume.

- The next column identifies days that were **Major Accumulation** (serious UPTREND indicator) or **Major Distribution** (serious Downtrend indicator) using the 1% minimum rise or fall with higher volume.
- **Minor accumulation** and **minor distribution days** are also identified – days that moved 0.2% or more but less than 1%.

#### **“CONSISTENT WITH”– THE SUBTLE, BUT TELLING MOVES**

The last column is an UPTREND /Downtrend indicator.

Think of a healthy Uptrend. It will have many days where the index rises with increased volume.

But even in the most robust Uptrend, \* not every day will be up. In any Uptrend, there will be some down days. If they have higher volume, then the day becomes a distribution day but if the volume is lighter (as frequently happens in an Uptrend), then the down day is NOT a distribution day. In fact, a drop on lighter 4747.62 volume says they market is NOT selling off heavily – good news and consistent with the Uptrend.

Using the Healthy UPTREND/Downtrend price and volume movement listed above.

- For example, if the Nasdaq closing price rose 0.7% and the volume rose 2% (up and up), that movement is “consistent with” the price-volume action of a Healthy UPTREND.
- If the price drops 0.5% and the volume rises 1.2% (down and up), that movement is “consistent with” the price-volume action of a Healthy Downtrend as indicated in the table above.
- Any index change less than + or – 0.3% or volume change less than + or – 1% has no “consistent with” notation. Price and volume movements that small is not strong enough to tell us about the market movement.

## EXAMPLE OF ACCUMULATION AND DISTRIBUTION WITH EXPANDED EXPLANATION OF TERMS:

Today's Market Action with explanation						
2/5/16	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg	Accumulation or Distribution Day?	Current Trend: DOWNTREND Began 1/4/2015
Index	4363.14	-3.2%	+13.8%	+21.8%	Major Distribution	+11.3%
S&P500	1879.92	-1.9%	NYSE Volume		Neither	+6.6%
NYSE	9,390.33	-1.5%	-5.3%	+15.0%	Neither	+6.2%
DJIA	16,204.62	-1.3%			Neither	+5.5%

A **Major Accumulation Day**: Price RISES 1.0% or more and higher Volume than the day before  
A **Minor accumulation Day**: Price RISES 0.2% or more and Volume is strong (either higher volume or is well-above average volume)

A **Major Distribution Day**: Price FALLS 1.0% or more and higher Volume than the day before.  
A **Minor distribution Day**: Price FALLS 0.2% or more, Volume is strong (either higher volume or is well-above average volume)

A **Stalling minor distribution Day**: Only in an up-trending index or stock, price is FLAT or DOWN slightly compared to the day before, closing in the bottom half of the day's range and volume is heavier or about equal to the day before or strong compared to the past market. It's the price closing low in the day's range after an uptrend that is the key for this designation. Price close to flat and higher or consistent volume indicates the big money (institutions: mutual funds, banks, etc.) are gently selling, trying to sneak out so you won't notice.

\*\* The "CURRENT TREND" column calculates how far each index has moved in the current trend assuming you purchased the index (which is not buyable) at the opening price on the day after the trend change signal.

- **When this column is GREEN, the index has moved in the direction of the market trend.**
- **HOWEVER, when this column is RED, the index change has fallen into negative territory (which could be a rise during a Downtrend)**

An **ACCUMULATION** day points at heavy buying by institutional money managers - the mutual funds, pension funds, banks, etc.  
A **DISTRIBUTION** day points at heavy selling by institutional money managers.
