A *TREND-FOLLOWING STRATEGY*

CURRENT MARKET DIRECTION: UPTREND under PRESSURE.

Current Armchair Investor actions:

Wait in CASH (sell QQQ)

The market was OK with Federal Reserve mid-day talk Friday. But then President Trump tweeted, “We don’t need China and, frankly, would be far better off without them.” And then added a disruptive (but not directly enforceable) tweet: “**American companies are hereby ordered to immediately start looking for an alternative to China.**” Was it meant to just scare China? Trump *could* take action to make dealing with China more difficult and expensive for US companies. (And I’m sure many US companies have already started looking for alternatives.) Will Trump’s New York bullying will get the results he wants at home and abroad?

NOTE: the Nasdaq is UP 17% this year.

MY PLAN FOR MONDAY:

- **Sell the QQQ if the market stays lower for one hour.** (Note: A Put-Call ratio over 1.15 predicts a market rise is likely the next day. Friday’s ratio was 2.0!!)
- **Build my Watch List of stocks to BUY as they breakout.**
 - *(Yes, I may buy a stock that has top-notch financials and technical (chart) ratings and is at a buy signal if the market is in “uptrend under pressure.”)*

Watch the market action closely:

- **Closing below the 200-day moving average lines could put the market back into DOWNTREND (CORRECTION).**

DAILY MARKET ACTION

8/23/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL
Nasdaq	7,751.77	-3.0%	+23.8%	+5.2%	Major Distribution	+0.9%

DJIA	25,628.90	-2.4%	+36.1%	+13.4%	Major Distribution	-0.7%

An accumulation Day: Price RISES 0.2% or more with strong Volume (either higher than the day before or is well-above average volume). A distribution Day: Price FALLS 0.2% or more with strong Volume.

NOTE: Look for days with higher volume than the day before to identify accumulation and distribution days.

This table tracks the returns you would now have if you had followed the Armchair Investor plan and bought the ETFs listed above at the opening price on the morning of 1/7/2019, the day after the new "Market in Uptrend" signal.

Notice the large drop in stocks with A or B ratings showing strong selling by institutional investors:

**Over the last 4 weeks:
the As plus Bs fell from 54% to 33% today which confirms weakness (selling off) in this Uptrend.
The rise to 39% last Friday is smidge of encouragement!**

HOW CAN YOU CAPTURE THOSE GREAT MARKET TRACKING GAINS SHOWN ABOVE?

It's as easy as 1- 2- 3!

THE ARMCHAIR INVESTOR PLAN:

ON 8/13/2019, THE MARKET MOVED INTO STEP 1: NEW UPTREND

STEP 1: In an Uptrend, buy the QQQ, a Nasdaq 100 ETF.

Find the market direction diagnosis every night in this newsletter. At the Uptrend signal, buy the QQQ (or one of the multiple Uptrend ETFs shown in a table above) the next morning.

Just in case protection: When you receive your confirmation of the purchase price, place an 8% STOP LOSS order to protect your portfolio from a sudden market reversal (executing this sale is rare – I almost always sell when the market goes into “under pressure or Downtrend – see Step 2 below). Your broker can help you set up this order.

This upward ride is the most exciting part of trend-following – Ride the escalator up, up, up as the market rises. Enjoy your ETF investment as it increases with the rise of the market. Did you get your share of those extraordinary rises in this Uptrend!

ON 8/14/2019, THE MARKET MOVED INTO STEP 2: Uptrend under Pressure:

STEP 2: When the Uptrend slows down: “Uptrend under Pressure”

This week's new Uptrend had a deep Distribution day on Wednesday, the second day of a new Uptrend. You should be very weary of that serious reversal!

- After only 6 days of the Downtrend, the reversal to Uptrend on Tuesday (8/13) was exciting! A new Uptrend can provide substantial, quick gains.
- But the immediate 3% sell-off on the next day revealed a market that may be over-reacting to news and our President's tweets.
- When a market is over-reacting, it is unpredictable and, therefore too risky. Be sure your stops are in!

STEP 3: When the market diagnosis changes to Downtrend.

Selling your Uptrend ETF position (QQQ, QLD or TQQQ) will capture gains earned in Steps 1 & 2 above. Wait in cash. After exiting the Uptrend ETF, wait in cash until the next Uptrend signal.

Also: Watch this box for a signal to invest in an inverse ETF.

NOTE: Not every market direction signal ends with a positive return. But overall, the ETFs have outperformed the market when traded according to these guidelines. Plus the market direction signals will help you by indicating when it is most effective to consider adding individual stocks to your portfolio (with a strong uptrending market).

DO YOU INVEST IN INDIVIDUAL STOCKS?—

Always consider taking some profit if significant distribution is showing up for your individual stocks. However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**

One of the reasons I pay so much attention to the Investor's Business Daily strategies and books (*How to Make Money in Stocks series*) is that they work consistently. If you or someone you know is interested in stock market investing, I encourage them to start with:

- *How to Make Money in Stocks – Getting started* by Matt Galgani. Then they can move on to some of the more advanced books.
