CURRENT MARKET DIRECTION: UPTREND under PRESSURE.

**Current Armchair Investor
action:**

Hold QQQ

The third distribution day out of the last four trading days is NOT good news!

- I hold the QQQ but realize this position is now at a 1/2% loss.
- **NOTE GOOD NEWS.** the Nasdaq is UP 18% this year. With the market, you must take the bad with the good!

Have you grabbed these gains! Use this newsletter to understand the Armchair Investor's "Market Trend-following".

MY PLAN FOR WEDNESDAY: Hold the QQQ. Watch the market.

- The three distribution days in the last four trading days has me "ON ALERT!"
 - One more distribution day this week with confirming negative news or stock failures could cause me to exit half or all of the QQQ.
 - **REMEMBER: CASH IS A POSITION!** And sometimes cash is the safest place to be.
- I build my Watch List of stocks to BUY as they breakout.
 - (Yes, I may buy a stock that has top-notch financials and technical (chart) ratings and is at a buy signal if the market is in "uptrend under pressure.")

Watch the market action closely:

- Closing below the 200-day moving average lines could put the market back into **DOWNTREND (CORRECTION).**

This table tracks the returns you would now have if you had followed the Armchair Investor plan and bought the ETFs listed above at the opening price on the morning after the new "Market in Uptrend" signal.

HOW CAN YOU CAPTURE THOSE GREAT MARKET TRACKING GAINS SHOWN ABOVE?

It's as easy as 1- 2- 3!

THE ARMCHAIR INVESTOR PLAN:

ON 8/13/2019, THE MARKET MOVED INTO STEP 1: NEW UPTREND

STEP 1: In an Uptrend, buy the QQQ, a Nasdaq 100 ETF.

Find the market direction diagnosis every night in this newsletter. At the Uptrend signal, buy the QQQ (or one of the multiple Uptrend ETFs shown in a table above) the next morning.

Just in case protection: When you receive your confirmation of the purchase price, place an 8% STOP LOSS order to protect your portfolio from a sudden market reversal (executing this sale is rare – I almost always sell when the market goes into “under pressure or Downtrend – see Step 2 below). Your broker can help you set up this order.

This upward ride is the most exciting part of trend-following – Ride the escalator up, up, up as the market rises. Enjoy your ETF investment as it increases with the rise of the market. Did you get your share of those extraordinary rises in this Uptrend!

ON 8/14/2019, THE MARKET MOVED INTO STEP 2: Uptrend under Pressure:

STEP 2: When the Uptrend slows down: “Uptrend under Pressure”

“Uptrend under Pressure” means the

- The market is showing enough distribution days – down days on higher volume – to be concerned and cautious.

STEP 3: When the market diagnosis changes to Downtrend.

Selling your Uptrend ETF position (QQQ, QLD or TQQQ) will capture gains earned in Steps 1 & 2 above. Wait in cash. After exiting the Uptrend ETF, wait in cash until the next Uptrend signal.

Also: Watch this box for a signal to invest in an inverse ETF.

NOTE: Not every market direction signal ends with a positive return. But overall, the ETFs have outperformed the market when traded according to these guidelines.

Plus the market direction signals will help you by indicating when it is most effective to

DO YOU INVEST IN INDIVIDUAL STOCKS?—

Always consider taking some profit if significant distribution is showing up for your individual stocks. However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**
