

ARMCHAIR INVESTOR^(sm) MORNING MARKET NEWSLETTER

A TREND-FOLLOWING STRATEGY

Tuesday, 9/17 AfTA (Association for Technical Analysis) Crowne Plaza, 14315 Midway Rd, Addison

CURRENT MARKET DIRECTION: UPTREND

**Current Armchair Investor
action:**

Hold QQQ

The major indexes held above their 50-average moving average lines following last weeks' big rises (S&P500 +1.8%, Nasdaq +1.6%). BUT The Sector leader list was chopped in half (8 stocks on Friday, only 4 on Monday) as the recent winning Software Enterprise sector continued its freefall.

That sector was # 4 just 6 weeks ago, # 10 on Friday and # 15 on Monday. **YIKES!**

What cause such a drop? Usually irrationally exuberant buying pushes a sector (or stock) higher than is supported by its numbers. Doesn't everyone want to get on a big winner? A few disappointing news items or earnings reports can cause a big sell-off.

>>>>Be on daily watch for distribution day warning signs in your stocks! Riding a winner up is great fun. Holding on for the rise down can cause *crying!*

Current Signs of Market Strength:

- Both major indexes held above their 50-day m.a. lines, rising almost 6% in the last 4 weeks.
- The Nasdaq index showed the most improvement in its Accumulation rating thanks to the rapid, profitable growth of its high-flying cloud and software companies. (See the index Acc/Distribution historical table below)

Current Signs of Market Weakness:

- Both indexes are still below their recent highs (see that table below).
- Many of the recent rising days had lower volume showing a lack of wide support.

MY PLAN FOR TUESDAY: Hold the QQQ and...

I'm still looking for a strong accumulation day (indexes rise with higher volume) to buy the TQQQ (triple QQQ). Will news and Tweets be disruptive?

My 8% protective stops (below the purchase of the QQQ) remain in effect.

If the market shows additional strength, I will buy starter positions in the best stocks from my watch list.

HOW CAN YOU CAPTURE THOSE GREAT MARKET TRACKING GAINS SHOWN ABOVE?

It's as easy as 1- 2- 3!

THE ARMCHAIR INVESTOR PLAN:

GREAT NEWS: The market moved back to **Step 1 Uptrend on 9/5/2019 with broad positive price/volume action!** That was a **Step 1 signal** to buy and hold the QQQ, if you don't have them in your portfolio.

STEP 1: In an Uptrend, hold the QQQ, a Nasdaq100 ETF.

Find the market direction diagnosis every night in this newsletter. At the Uptrend signal, buy the QQQ the next morning if you don't have that position, yet. The QQQ follows the ups and downs of the Nasdaq100, allowing you to grab the rises of this Uptrend. With some additional positive action, you may decide to switch to the double QQQ ETF (QLD) or triple QQQ (TQQQ). I do not recommend these moves for the first time investor.

Just in case protection: When you receive your confirmation of the purchase price, place an 8% STOP LOSS order to protect your portfolio from a sudden market reversal (executing this sale is rare – I almost always sell when the market goes into “under pressure or Downtrend – see Step 2 below). Your broker can help you set up this order.

This upward ride is the most exciting part of trend-following – Ride the escalator up, up, up as the market rises.

Although not every Uptrend signal generates a positive return, most do. **History shows you will earn the highest returns if you act fast to buy the QQQ when the market signals a clear Uptrend (as happened on Thursday 9/5)** Enjoy your ETF investment as it increases with the rise of the market.

STEP 2: When the Uptrend slows down: “Uptrend under Pressure”

“Uptrend under Pressure” means the

- The market is showing enough distribution days – down days on higher volume – **to be concerned and cautious. Be sure to check on your investments each night!**
- From **“Uptrend under Pressure”** the market diagnosis could:
 - Rise, showing strength, and return to a healthy Uptrend – **STEP 1**, or
 - Could have more distribution days and fall into a **Downtrend (correction)** – **Step 3**

STEP 3: When the market diagnosis changes to Downtrend.

Selling your Uptrend ETF position (QQQ, QLD or TQQQ) will capture gains earned in

EXAMPLE and DEFINITIONS used in this newsletter:

DAILY MARKET ACTION						
8/30/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL
Nasdaq	7,962.88	-0.1%	-15.0%	-30.6%	Neither	+0.9%
S&P500	2,925.35	+0.1%	NYSE Volume		Neither	+2.2%
DJIA	26,403.28	+0.16%	-5.1%	-13.3%	Neither	+2.2%
<p>A Major Accumulation Day: Price RISES 1.0% or more with higher Volume than the day before. A minor accumulation Day: Price RISES 0.2% or more with strong Volume (either higher than the day before or is well-above average volume). A Major Distribution Day: Price FALLS 1.0% or more with higher Volume than the day before. A minor distribution Day: Price FALLS 0.2% or more with strong Volume (either higher than the day before or is well-above average volume).</p>						
<p>** The Recent Trend Gains/Losses column calculates how far each index has moved from the recent trend change assuming you purchased the index (in an Uptrend) or sold the index (in a Downtrend) at the opening price on the day after the signal. Although not every year outperforms the common "buy and hold" strategy, using these signals has significantly OUTPERFORMED the buy-and-hold strategy in total since 1/1/2000.</p>						
<p>Why are my Final Volumes Sometimes Different than Yours? Why do the volume numbers on this table not always match other sources such as Investors.com, Nasdaq exchange, other charting sites? The 4:00 close of the market immediately shows an accurate final price. But the volume figures continue to trickle in for hours. At some time, the accumulation of volume numbers has to be cut off. Also, some sources include the volume of stocks listed on one exchange but traded on another (e.g. Apple stock listed on Nasdaq but also traded on other exchanges.) And some sources do not.</p>						

DO YOU INVEST IN INDIVIDUAL STOCKS?—

Always consider taking some profit if significant distribution is showing up for your individual stocks. However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**
