CURRENT MARKET DIRECTION: UPTREND

Current Armchair Investor action:

Hold QQQ

The major indexes held above their 50-average moving average lines for the 8th day, a sign of buying strength.

>>>>>Be on daily watch for distribution day warning signs in your individual stocks! Riding a winner up is great fun. Holding on for the ride down can cause *crying*.....Avoid it.

Current Signs of Market Strength:

- Both major indexes are holding above their 50-day m.a. lines. Even after the indexes fell on Friday and Monday, Tuesday's rise left both indexes up almost 5% since the last Uptrend signal!
- The **stocks "under accumulation"** (being heavily bought) **rose from 1/3 to over 1/2** of all stocks in **last 4 weeks!** (See "Progress in Accumulation/Distribution" table later in this newsletter). That means it **is easy to find stocks being scooped up by institutional investors**. **You want those!**
- **S&P500 is poised to break through to news high – just 1% from that goal.**

Current Signs of Market Weakness:

- Only 2 days out of last 20 were accumulation days! **Where is the volume on rising days?**
- The indexes are holding under their recent, all-time highs.

MY PLAN FOR WEDNESDAY: Hold the QQQ and...

I'm still looking for a strong accumulation day (when indexes rise with higher volume) to buy the TQQQ (triple QQQ). Until I see more market strength, I hold only the QQQ ETF to capture the market direction.

I cannot deny the very pleasant recent rise in major indexes. I am buying starter positions (50% of intended position) in the best stocks from my watch list as they breakout, then immediately putting 8% stops on each new purchase – just in case!

DAILY MARKET ACTION

9/17/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL

Stocks with an A or B rating are under accumulation (being bought.)
 Stocks with a D or E rating are under distribution (being sold).
 "2 weeks ago" is 10 market days ago; "4 weeks ago" is 20 days ago. The ratings which are higher than two weeks prior are colored light GREEN. Lower ratings are PINK.

If you are an investor in individual stocks, be sure to read the investors.com article shown below (just click on it to link to the article) about an important sell signal that is showing up in several (too many) popular, winning stocks. You know I am a stickler for tracking each stock I own each day, looking for distribution days and other signs of weakness.

This article will hit you with 7 cases of an important sell rule showing up in some of the most popular stocks of this current market.

HOW CAN YOU CAPTURE THOSE GREAT MARKET TRACKING GAINS SHOWN ABOVE?

THE ARMCHAIR INVESTOR PLAN:

It's as easy as 1- 2- 3!

GREAT NEWS: The market moved back to STEP 1: Uptrend on 9/5/2019 with broad positive price/volume action!

The market is now in Step 1, a signal to buy and hold the QQQ. Stay tuned nightly for the next step.....

STEP 1: In an Uptrend, hold the QQQ, a Nasdaq100 ETF.

Find the market direction diagnosis every night in this newsletter. At the Uptrend signal, buy the QQQ the next morning if you don't have that position, yet. The QQQ follows the ups and downs of the Nasdaq100, allowing you to grab the rises of this Uptrend. With some additional positive action, you may decide to switch to the double QQQ ETF (QLD) or triple QQQ (TQQQ). I do not recommend these moves for the first time investor.

Just in case protection: When you receive your confirmation of the purchase price, place an **8% STOP LOSS** order to protect your portfolio from a sudden market reversal (executing this sale is rare – I almost always sell when the market goes into “under pressure” or Downtrend – see Step 2 below). Your broker can help you set up this order.

This upward ride is the most exciting part of trend-following – Ride the escalator up, up, up as the market rises. Exit when the market moves into Downtrend.

Although not every Uptrend signal generates a positive return, most do.

History shows you will earn the highest returns if you act fast to buy the QQQ when the market signals a clear Uptrend (as happened on Thursday 9/5) Enjoy your ETF investment as it increases with the rise of the market.

STEP 2: When the Uptrend slows down: “Uptrend under Pressure”

“Uptrend under Pressure” means the

- The market is showing enough distribution days – down days on higher volume – **to be concerned and cautious. Be sure to check on your investments each night!**
- From **“Uptrend under Pressure”** the market diagnosis could:
 - Rise, showing strength, and return to a healthy Uptrend – **STEP 1**, or
 - Could have more distribution days and fall into a **Downtrend (correction)**

STEP 3: When the market diagnosis changes to Downtrend. Selling your Uptrend ETF position (QQQ, QLD or TQQQ) will capture gains earned in Steps 1 & 2 above. Wait in cash. After exiting the Uptrend ETF, wait in cash until the next Uptrend signal. **Also: Watch this box for a signal to invest in an inverse ETF.**

NOTE: Not every market direction signal ends with a positive return. But overall, the ETFs have outperformed the market when traded according to these guidelines. Plus the market direction signals will help you by indicating when it is most effective to consider adding individual stocks to your portfolio (with a strong uptrending market).

DAILY MARKET ACTION						
8/30/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL
Nasdaq	7,962.88	-0.1%	-15.0%	-30.6%	Neither	+0.9%
S&P500	2,925.35	+0.1%	NYSE Volume		Neither	+2.2%
DJIA	26,403.28	+0.16%	-5.1%	-13.3%	Neither	+2.2%
<p>A Major Accumulation Day: Price RISES 1.0% or more with higher Volume than the day before. A minor accumulation Day: Price RISES 0.2% or more with strong Volume (either higher than the day before or is well-above average volume). A Major Distribution Day: Price FALLS 1.0% or more with higher Volume than the day before. A minor distribution Day: Price FALLS 0.2% or more with strong Volume (either higher than the day before or is well-above average volume).</p>						
<p>** The Recent Trend Gains/Losses column calculates how far each index has moved from the recent trend change assuming you purchased the index (in an Uptrend) or sold the index (in a Downtrend) at the opening price on the day after the signal. Although not every year outperforms the common "buy and hold" strategy, using these signals has significantly OUTPERFORMED the buy-and-hold strategy in total since 1/1/2000.</p>						
<p><u>Why are my Final Volumes Sometimes Different than Yours?</u> Why do the volume numbers on this table not always match other sources such as Investors.com, Nasdaq exchange, other charting sites? The 4:00 close of the market immediately shows an accurate final price. But the volume figures continue to trickle in for hours. At some time, the accumulation of volume numbers has to be cut off. Also, some sources include the volume of stocks listed on one exchange but traded on another (e.g. Apple stock listed on Nasdaq but also traded on other exchanges.) And some sources do not.</p>						

DO YOU INVEST IN INDIVIDUAL STOCKS?—

Always consider taking some profit if significant distribution is showing up for your individual stocks. However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**
