A TREND-FOLLOWING STRATEGY

### CURRENT MARKET DIRECTION: UPTREND

Armchair Investor Trend-following  
Investment Action:

I hold the QQQ  
My TQQQ was stopped out!

**Thursday**: I hold the QQQ. Let me share with you **four of the keys** I use to determine the strength of the market. One or two factors are never enough! I use dozens to determine my take on market direction and my QQQ actions!

1	The <u>direction</u> of the current market is <b>Uptrend</b>	<b>Check!</b>
2	<u>Most of the boxes</u> in the <b>MARKET FACTORS, COUNTS &amp; RATINGS</b> table are green (uptrend)	<b>Check!</b>
3	The <u>Uptrend days</u> and the <u>accumulation days</u> dominate the last 20 days. See the <b>MARKET ACTION (Nasdaq) OVER THE LAST 20 DAYS</b> table.	<b>Check!</b>
4	The percent of the stocks with A or B Accumulation ratings is over 50%. See <b>PROGRESS IN ACCUMULATION/ DISTRIBUTION RATINGS</b> .	<b>Check!</b>

#### Some other Signs of **Market Strength**:

- **Major indexes hold less than 2% below all-time highs!** See page 9
- **8 Accumulation days versus 1 distribution day** for the NASDAQ last 20 trading days! See page 7
- **53% of all stocks have strong A or B Accumulation ratings** – Lots of winners to buy when the market shows more strength! See page 8
- **The 1.8 ratio of rising to falling Leader stocks** is strong 1.5 ratio. page 6

**Current Signs of Market Weakness:** 1 distribution day in 20 trading days. page 7

DAILY MARKET ACTION						
1/30/20	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL
Nasdaq	\$9,298.93	+0.3%	+6.0%	+6.0%	Minor accumulation	+16.1%
S&P500	\$3,283.66	+0.3%	NYSE Volume		Minor accumulation	+12.9%
DJIA	\$28,859.44	+0.4%	+5.4%	+8.9%	Minor accumulation	+10.6%

**MY PLAN FOR FRIDAY:** Hold the QQQ. (Having been stopped out of the TQQQ, I will watch how the TQQQ behaves and MIGHT buy it when market moves higher.

# THE ARMCHAIR INVESTOR TREND-FOLLOWING STRATEGY

*A Simple and Powerful Tool to Increase Your Returns*

## Armchair Investor Mantra:

- Be IN the market when it is going up
- Be OUT of the market when it is going down
- Protect your portfolio with 8% stops.

**The primary purpose of this Armchair Investor newsletter is to let you, the reader, earn bigger returns riding the trend of the market.**

By following the best (most reliable) market change signals, you can:

- Get in the market near the bottom of a new bull market
- Exit the market near the top, and
  - Capture more of the gains,
  - Avoid more of the losses and, thus
  - Earn higher returns than the “buy-and-hold” strategy recommended by many brokers and money managers!

### **Why a “Buy-and-Hold” strategy doesn’t work well:**

When the market has topped and starts to fall, do you really want to let your profits fade away as the market falls – sometimes for years? Of course not! Selling your uptrend position allows you to capture your gains and store them safely away in cash. What is the right time to exit? This newsletter will show you the market’s signal.

### **Most downtrends (also called corrections) fall faster than the uptrends rise.**

***I am not willing to sit in a sick, falling market and lose my hard earned gains!*** Cash is a safer position!

Here are the three signals I will give you in this newsletter for the three market conditions:

- **Uptrends:** When the market rises into an Uptrend, buy and hold the QQQ, a stock that rises with the general market.
- **Uptrend showing Weakness:** As a market Uptrend starts to fall, you will receive the signal to exit the QQQ and safely wait in cash.
- **Downtrends:** If the market continues down, you will receive a signal to buy the PSQ, a stock that rises while the market falls.

**FINALLY – For individual stocks:** Use these market signals to help you when buying individual stocks. You increase your likelihood of a successful stock purchase if you only buy stocks when the market is in an Uptrend. Lesson: Don’t fight the market trend!

The Armchair Investor strategy (explained above) is simple:

- Be IN the market when it is going up.
- Be OUT of the market when it is going down.
- PROTECT your portfolio with an 8% stop.

The Armchair Investor Trend-following strategy has been the fastest, easiest and lower risk way to capture the swings of the market that I have found! I developed this QQQ strategy in 2002 and have successfully followed it for the last 19 years.

HOW CAN YOU CAPTURE THOSE  
GREAT MARKET GAINS SHOWN ABOVE?

## **THE ARMCHAIR INVESTOR PLAN:**

*It's as easy as 1- 2- 3!*

**Current market direction: STEP 1: UPTREND**

---

### **STEP 1: In an Uptrend, hold the QQQ, a Nasdaq100 ETF**

Find the market direction diagnosis every night in this newsletter. At the Uptrend signal, buy the QQQ the next morning if you don't have that position, yet. The QQQ follows the ups and downs of the Nasdaq100, allowing you to grab the rises of this Uptrend. With some additional positive action, you may decide to switch to the double QQQ ETF (QLD) or triple QQQ (TQQQ). I do not recommend these moves for the first time investor.

**Just in case protection:** When you receive your confirmation of the purchase price, place an **8% STOP LOSS** order to protect your portfolio from a sudden market reversal (executing this sale is rare – I almost always sell when the market goes into “under pressure” or Downtrend – see Step 2 below). Your broker can help you set up this order.

**This upward ride is the most exciting part of trend-following – Ride the escalator up, up, up as the market rises. Exit when the market moves into Downtrend.**

**Although not every Uptrend signal generates a positive return, most do.**

History shows you will earn the highest returns if you act fast to buy the QQQ when the market signals a clear Uptrend (as happened on Thursday 9/5) Enjoy your ETF investment as it increases with the rise of the market.

## **STEP 2: When the Uptrend slows down: “Uptrend under Pressure”**

“Uptrend under Pressure” is a Warning Message and means:

- The market is showing significant distribution (selling pressure) that **investors should:**
  - **Be concerned about the strength of this Uptrend.** During an Uptrend under Pressure, this newsletter may move into CASH position to avoid possible losses.
  - **Check on the health of your investments each night!** Many investors do not buy new stock positions during this period due to higher failure rates.
- **From STEP 2, “Uptrend under Pressure,”** the market diagnosis will go one of two ways:
  - **Rise** with volume strength, and return to **Uptrend – (STEP 1)**, or
  - Continue to add more distribution days and **fall** into a **Downtrend (correction)**
- This is a time to pay attention to the market behavior.

## **STEP 3: When the market diagnosis goes to “Downtrend”**

**Capture much of the gains from the Uptrend (minimizing Downtrend losses) by selling your Uptrend ETF position (QQQ, QLD or TQQQ) when the market diagnosis goes into Downtrend will capture much of the gains earned in Steps 1 & 2 above.**

**After exiting the Uptrend ETF, wait in cash** until the next Uptrend signal. More recent Downtrends have been short term and not tradable.

**If the Downtrend is strong, this box will identify a signal to invest in an inverse ETF which makes you profits as the market falls!**

**NOTE: Not every market direction signal ends with a positive return.** But overall, the ETFs have outperformed the market when traded according to these guidelines. Plus the market direction signals will help you by indicating when it is most effective to consider adding individual stocks to your portfolio (with a strong uptrending market).

NOTE: This table tracks CLOSING all-time high prices with the heavy black boxes around the price. When the Nasdaq hit a new all-time high on 12/27/2019 but then closed below the prior high of 12/26,

For the MARKET ACTION OVER THE LAST 20 DAYS: Green = Uptrend.  
 Yellow = Uptrend under Pressure (e.g. Uptrend showing weakness)  
 Red = Downtrend (also called correction).

**The Armchair Investor Trend-following Basic strategy uses the QQQ.** If you had bought the QLD (double QQQ's) or TQQQ (triple QQQ's) you would have made a much prettier return! But you also have a higher risk when the market reverses!

**>>>>Below is the GOOD NEWS about the progress of the Accumulation/Distribution ratings over the last 4 weeks** Over 50% shows a strong, rising market!

PROGRESS IN ACCUMULATION/DISTRIBUTION RATINGS							
. The percent of stocks with A or B Accumulation ratings falls to strong 53% of all stocks over \$5! <b>Wow! Winners abound!</b>							
		A	B	C	D	E	As + Bs
4 weeks ago	12/31	16%	48%	20%	12%	4%	64%
3 weeks ago	1/8	15%	48%	21%	12%	4%	63%
2 weeks ago	1/15	18%	49%	19%	11%	4%	66%
1 week ago	1/23	17%	48%	19%	13%	4%	65%
	1/30	12%	41%	22%	18%	7%	<b>53%</b>
	# stocks in each rating:	793	2710	1444	1188	442	6577

Stocks with an A or B rating are under accumulation (being bought.)  
Stocks with a D or E rating are under distribution (being sold).

**AN EVEN SPLIT:** Since there are 5 ratings, each would equally get 20%. When the market shows heavy buying of top stocks, the A and B counts will rise and the D and E counts will fall. When the market is heavily selling stocks, the opposite happens,

**THE SIGNAL:** Notice I have noted the % of all stocks that have A or B ratings.

- When the A+B% rises, I know the market, as a whole, is being bought.
- Any total of A+B's over their "fair share" of 40% (2 ratings out of the 5 possible ratings= 40%) is **good news**. (continued next page...)

**A BETTER SIGNAL** A rising A plus B total is even better! Examine the last column to see the jump in A+B over the last 4 weeks! This means, if you are looking at the best stocks, there are lots of high performing stocks to consider.

>>>>Now, go find the strongest stocks, breaking out powerfully from well-formed bases!

The "TYPES OF WEEK" are:  
**ACCUMULATION WEEK** PRICE RISES 0.2% or more and VOLUME RISES  
**DISTRIBUTION WEEK** PRICE FALLS 0.2% or more and VOLUME RISES  
 Another type of DISTRIBUTION(\*): WEEK PRICE FALLS 0.2% or more & VOLUME is 15% or more above average even without an increase in volume.  
 The NYSE volume is used for the S&P500, DJIA and NYSE Composite.

**EXAMPLE of the DAILY MARKET ACTION table  
with explanation of terms and signals:**

THE DAILY MARKET ACTION						
9/27/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL
Nasdaq	7,939.63	-1.1%	+8.5%	-11.0%	Major Distribution	+1.7%
S&P500	2,961.79	-0.5%	NYSE Volume		minor distribution	+3.4%
DJIA	26,820.25	-0.3%	+5.1%	-12.0%	minor distribution	+3.8%

A **Major Accumulation Day**: Price RISES 1.0% or more with higher Volume than the day before.  
A **minor accumulation Day**: Price RISES 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).  
A **Major Distribution Day**: Price FALLS 1.0% or more with higher Volume than the day before.  
A **minor distribution Day**: Price FALLS 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).  
If the day's price/volume action does not meet the accumulation or distribution definitions above, it is a **neither day**.

\*\* The **Recent Trend Gains/Losses** column calculates how far each index has moved from the recent trend change assuming you purchased the index (in an Uptrend) or sold the index (in a Downtrend) at the opening price on the day after the signal. Although not every year outperforms the common "buy and hold" strategy, using these signals has significantly OUTPERFORMED the buy-and-hold strategy in total since 1/1/2000.

**Why are my Final Volumes Sometimes Different than Yours?** Why do the volume numbers on this table not always match other web sites? The 4:00 close of the market immediately shows an accurate final price. But the volume figures continue to trickle in for hours. At some time, the accumulation of volume numbers has to be cut off and different sites use different cut-offs. Also, some sources include the volume of stocks listed on one exchange but traded on another (e.g. Apple stock listed on Nasdaq but also traded on other exchanges.) And some sources do not. The most important rule is to consistently use only one source for volume.

**EXAMPLE and DEFINITIONS used in this newsletter:**

The most important rule is to consistently use the same source for your volume.</p>						

## **DO YOU INVEST IN INDIVIDUAL STOCKS?—**

**Always consider taking some profit if significant distribution is showing up for your individual stocks.** However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

**To get a deeper sense of the health of the market, look at the MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**
