

# ARMCHAIR INVESTOR – THE MARKET’S MESSAGE

## NEWSLETTER

A FACT-BASED, TREND-FOLLOWING STRATEGY

See the weekly full Armchair Investor class schedule (S, M, T, W) [See all events](#)

### CURRENT MARKET DIRECTION: UPTREND

<b>Armchair Investor</b> Trend-following Investment Position:	Holding the QQQ.
<b>Armchair Investor</b> 2020 Returns See trades on page 2	<b>+46.5% year-to-date</b> In only 8 trades! (see page 2)

**THE MARKET’S MESSAGE:** Market volatility is always going to be with us. And sudden market moves can be very frustrating. The Nasdaq and S&P500 were up about 2% Monday! By 2:30 pm on Tuesday, both indexes were in new high territory. And I was smiling ear-to-ear.

But one word from president Trump saying he would not support the Democratic-backed economic package sent the market into free-fall.

**EARLY MORNING UPDATE:** Although, the futures are not a strong indicator of the coming day’s market action, it is encouraging to see this morning’s futures up about 0.7% as I write this, again based on another Trump Tweet for his next relief step. Any rising market is good news for me!

But what I do know is what Wall Street is doing day-by-day. They can’t hide it.

- **Wall Street is buying – consistently but not yet with wild enthusiasm!** The accumulation/distribution ratio is rising! The stocks being bought (rated A or B) rose from 37% to 43% in one week. *(I’d like more at a new Uptrend!)*
- The Nasdaq has stayed on the top side of its 50-day moving average line. For the last 7 days, a pleasant sign of optimism.

But beware. I also see Wall Street buying carefully: slowly and consistently. And so should you. Half positions anyone?

DAILY MARKET ACTION						
10/6/20	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Index GAIN from 10/1 New Downtrend
Nasdaq	11154.60	-1.6%	+18.1%	+10.4%	Major Distribution	+5.1%

1	10/6/20	1154.60	-1.6%	+18.1%	5	Major Distribution	DOWNTREND

\* NOTE: The color of the "Current Trend Day Count" column indicates the market direction: Green = Uptrend, Yellow = Uptrend under Pressure, Red = Downtrend (correction).

## Current Signs of Market Strength

- The market diagnosis moved into **UPTREND** last Wednesday as both the Nasdaq and S&P500 had accumulation days and....
  - the **"BIG mover" on last Wednesday was the DJIA with a 1.2% rise on higher volume.** Note the DJIA is not usually considered a market direction mover. Its larger rise (1.2%) with higher volume was a moderately acceptable statement. (The Nasdaq and S&P500, which usually signal a new Uptrend, rose less than 1%.) This end-of-quarter volume paired with the index price rises added up to a positive total picture – but was not overwhelming .
- **>>>The Leader stocks RISING versus FALLING were a strong 2.1 ratio. This high ratio is an indicator of broad buying of the best stocks!**
  - I wonder where the 2-to-1 winners are coming from? The Leader list is an IBD secret, so we will never know. We only find out what is on that list by the stocks listed as "movers" in the daily Big Picture column.
    - A ratio over 1.5 is a strong indicator for upward action in the near term. A rating below 1.5 indicates an uncertain Uptrend OR a rotation away from exhausted, out of favor leader stocks as new leaders emerge. (A rating below 1.0 is weak.)
- Over the last week, **the percent of stocks with strong A and B Accumulation ratings rose from 41% to an over-proportionate amount of 47% showing buying has returned.**
- The **Nasdaq volume finally is settling down** (see the average volume line slowly falling) – but still much above "pre-Corona correction" days in early February. The unusually high volume adds a level of uncertainty to the market.

## Current Signs of Market Weakness

- The Nasdaq has shown **weakness in the last 14 trading days:**
  - **4 days were Major Distribution days** (the index dropped 1+% on higher volume indicating major selling days), only 1 minor accumulation day.
  - **10 of the 14 days were "consistent with" a Downtrend.** These days were distribution days (the 4 D-days mentioned above) or the 6 days that rose without higher volume.
  - One day had an insignificant price movement of -0.1%, a neutral day.
  - **Three recent days (9/29, 9/30, 10/2) were "consistent with" an Uptrend.**
- The **DJIA, Nasdaq and S&P500 have fallen back to their 50-day moving average lines.**
- With this serious amount of weakness, **you should review each of your stocks carefully for sell signals.** Hold the strong ones; consider selling or reducing your position in those showing weakness.

# THE NASDAQ UPWARD AND DOWNWARD CHANNELS

One of the features I like about [Investors.com's MarketSmith charts](#) is that I can draw in my own channel lines.

Below is the Nasdaq chart for the last 12 months. It shows:

- the January+ Uptrend that continued in the beginning of the year,
- The pink downtrend as the market crashed in February-March
- The amazing 5-month rise (Uptrend) of the market since March low.

Did you know annotations stay on the MarketSmith charts! Bravo to the designers. My notations will stay on the MarketSmith charts for years! I can go back and visit how I saw the market in 2000, 2008, 2015-16, etc.

That is one of MarketSmith's many truly unique and valuable features! I don't have to figure out what happened in those past periods again

. My annotations are there! Updated, Friday 9/25/2020. Vertical red lines identify distribution days (down days with higher volume indicating serious selling.)

>>>> I HIGHLY RECOMMEND MarketSmith for your investing CHARTS! Note the excellent annotations and markups I have added on the chart below.

Go to MarketSmith.com to try it out. All my distribution day notations (pink vertical lines) will be visible for years! I recently went back to the 2000 high. Yes – annotations were there!

The Nasdaq index 1-year chart as of the close on **Friday 10/2/2020**

## **DO YOU MAKE THESE INVESTING MISTAKES?**

- Do you miss buying a great stock at the price you knew was right?
- Do you sell too early and watch it continue to rise without you?
- Or do you hold on too long and lose the gains you just had?

Learn how to analyze your stocks for effective buy and sell signals.

**CLICK HERE:** to [Visit an Armchair Investor weekly ONLINE class](#)  
[Be my guest twice to see what we do that our students are raving about](#)

---

## **OR --- ARE YOU JUST TOO BUSY AND WISH THERE WERE A FAST WAY TO CAPTURE THESE GREAT MARKET GAINS?**

Then the **5-MINUTE INVESTOR** is for you! Join me for a quick way to use the market's signals to earn above market returns:

- Be IN the market when it's going up.
- Be OUT of the market when it's going down.
- Learn how!

Join me online for an Armchair Investor class given 4 times a week online. Click on the link below for the complete schedule

[Visit an Armchair Investor Online Class](#)

## **Investing in individual stocks? I am ALWAYS building a watch list of good stocks close to buy points. Want some good ideas?**

Join us Monday, Tuesday or Wednesday for an [online Armchair Investor class](#) <<. Are you new to the Armchair Investor classes? Visit twice as my guest (free)!

Click on this link to join us for an: [online Armchair Investor class](#)

When you register for an online Armchair Investor class, suggest a few stocks review in the class! *If you own a stock and are considering SELLING THAT STOCK, please note "SELL?" after the ticker.*

## **COMPARISON of the NASDAQ, S&P500 and DJIA Growth**

The chart below shows the returns of the **Nasdaq, the S&P500 and the DJIA** from 12/31/2019 through 10/2/2020. Where should you go shopping? The answer for me? Nasdaq! And, yes! I will buy a top stock wherever I find it! These results are why I focus on the Nasdaq and QQQ for my trend-following strategy:

## REMEMBER: BUY & HOLD IS NOT A STRONG INVESTING STRATEGY.

Imagine the difference in returns if you could just wait in cash as the market falls and get back in as it starts back up!

- It isn't necessary to get in at the bottom or out at the top!
- Just stepping out of the market somewhere *near the top* and getting back in *near the bottom* has had a HUGE IMPACT on my portfolio.

*It can take YEARS to complete a market Downtrend (correction) then recover back to where you were.*

## An EXAMPLE OF WHY BUY-AND-HOLD” COSTS YOU BIG BUCKS THIS YEAR.

- Over the last year, a “buy and hold” strategy has earned 15.0% for the S&P500. “Buy and hold” worked better for the Nasdaq earning 40.7%. But wait....
- **If you invested with the Armchair Investor strategy, you are UP 45% for 2020.** (see page 2 for daily updates of current Armchair Investor Strategy returns)
- Where do you want your money invested? Here's where many answer: **“The Armchair Investor strategy!”**

One last note: IF you invest in individual stocks, the best can be found on **both major indexes** (the Nasdaq and S&P500). Be sure to find the stocks with best ratings, base action and breakouts.

## **MARKET/CHART READING LESSON:**

### **The MarketSmith Relative Strength Line – My favorite!**

Go to any chart on the Investors.com web page. You will see the bumpy line labeled RS for Relative Strength. This line moves up or down with each price bar showing if this stock or index rose more or less than the S&P500.

Look at the Nasdaq daily chart (0NDQC) and notice that the RS line has risen since the Oct 2019 low, indicating it has earned higher returns.

Go to the monthly chart and note that the S&P500 has consistently outperformed the S&P500. (not ever month but most). The S&P500 does have some great stocks. That rising RS line tells us that, over time, the Nasdaq as a whole has done better than the S&P500. But just like shopping for groceries, I will buy from the market that has the best fruit, on any given day.

The Nasdaq continues to outperform the S&P500. Watch the RS line on Investors.com charts. This important line shows you how a stock or index is performing compared to the S&P500. A rising line indicates that stock or index has risen faster than the S&P500 (measured in percentage change.)

Note: Do not confuse IBD's RS line with the RSI line some charting system use. The RS measures how a stock is moving compared to the S&P500. Rising faster gives a higher rating. *Investopedia.com states: The relative strength index (RSI) is a momentum indicator that measures the magnitude of recent price changes to evaluate "overbought" or "oversold" **conditions** in the price of a stock or other asset.*

*The problem I have found with the RSI line is that some of the best, rising stocks can push an RSI line to the top of the rating (indicating overbought) just when I have a buy signal. As always, I tell you to use the indicators you find useful (profitable).*

**I am excited about the settling down in market volume. But I continue to be concerned about the sustained day-to-day price volatility.** It is surely affected by the uncertainty of the upcoming earnings announcements. **BE SURE YOUR STOPS ARE IN PLACE.**

**Every Day's Lesson: Whether you agree with your stock's daily results or not...**

- **YOUR JOB is to monitor its daily results and adjust your action accordingly.**
  - **Monday: Monitor.....and.....adjust.**
  - **Tuesday: Monitor.....and.....adjust.**
  - **Wednesday: Monitor.....and.....adjust.**
  - **Thursday: Monitor.....and.....adjust.**
  - **Friday: Monitor.....and.....adjust.**
  - **(repeat)**

## **KEY MARKET CONCEPTS APPLIED TO TODAY**

**THE GOOD NEWS:** The market continues in the direction it is going until it doesn't. This market is in confirmed Uptrend.

**THE BAD NEWS:** Almost none! With the Uptrend so strong, I have nothing to complain about except the annoying Wall Street fear mongers who want to scare you out of your stocks because they want to buy at today's low prices before they get even higher!

### **UNDERSTANDING THE "CONSISTENT WITH" COLUMN in the "MARKET ACTION (Nasdaq) OVER THE LAST 20 DAYS" TABLE**

**If the horse you are riding, dies. GET OFF!**

When the market (or your stock) dies – whether that is in a year, a month or tomorrow, the Armchair Investor Strategy will NOT “stay the course” and we won’t ride a falling market down. Instead, we will use our 20 years of market direction experience to identify optimum times to be in the market and times to be out of the market. (not guaranties!) (PS I love horses. They are amazing companions.)

Using my day-to-day price-volume analysis, my students and I have consistently been able to make money by:

**“Getting IN near the bottom”** and **“Getting OUT near the top.”**

The Armchair Investor strategy has allowed me to earn well-above-average returns since the 2000 top! See page 2 for this year’s exciting wins!

<b>HOW CLOSE ARE THE INDICES TO ALL-TIME HIGHS?</b>				
10/6/2020	Nasdaq	S&P500	NYSE	DJIA
Date of Index All-time High*	9/2/2020	9/2/2020	1/17/2020	2/12/2020
All-time High	<b>12074.76</b>	<b>3588.11</b>	14183.26	29568.27
Closing Price	11154.60	3360.97	11154.60	27772.76
Below (-) or Above (+) Recent High (%)	<b>-7.6%</b>	<b>-6.3%</b>	<b>-21.4%</b>	<b>-6.1%</b>

\*New Highs are daily intraday prices and are noted in **green** for a week, even if the price drops lower.  
The highest closing price in history of the index is **shown in green for that day**.

## **Prepare yourself for a NEW ECONOMY!**

I expect a major shift in how we do business: more online appointments, more working from home, reduced business travel (with reduced costs to businesses) We might actually see this lockdown period as **a slingshot into the a new, sleeker way of conducting business. And each of those new trends will help some business (online meetings, internet providers, online schools, casual clothing, healthy ready-to-eat food...)**  
**>>>>>>>> I would like to hear your ideas of where the big gains will occur!**

**Which industry groups and specific companies will thrive and which will dive in the after pandemic new economy???**

**WILL HISTORY REPEAT ITSELF?** In the financial crisis of 2007, it took the market 2 1/2 years to recover the 56% drop. Worse yet was the reaction to the dot.com 90's market over-inflation that crashed in March of 2000 and took 19 years for the market to "break even."

WHAT CAN WE (INDIVIDUAL INVESTORS) DO NOW? ONE lesson I have learned from every greatest investor I have studied:

**HUMAN NATURE DOESN'T CHANGE.**

**That is why the cups and handles, double bottoms, etc. continue to work. HUMAN NATURE DOESN'T CHANGE.** Human's nature is to survive and we are, therefore, fear and greed driven. And that is what cups and handles, double bottoms, etc. are all about.

**Stick with the Armchair Investor non-emotional, fact-based analysis to ride the market as it rises and exit as it falls. I have never been ashamed of exiting a failing market or stock..... or of riding a winner up, no matter what "they" say.**

**A SIMILAR TIME IN HISTORY** I've been looking for past examples and see a close one in 1998: a 33% drop during the "dotcom" rally in 1998, Everyone was sure 1998 was the top and got out. When it turned around, they all jumped in again. (continued next page)

When the 2000 crash occurred, their brokers told them to stay in because, "...It always comes back! Just look at 1998. When this market fails, I will just say, "GET OUT."

**Reminder: I do not make recommendations - just ideas to consider.**

**CALL ME IF YOU ARE STUCK! Charlotte – 214-995-6702**

**>>>>>I'm just hanging around the house!**

### **BONUS CHART-READING HISTORY LESSONS:**

Look at a Nasdaq or S&P500 daily chart as it crashed off the February all-time highs. (Charts are at the end of this newsletter.)

Notice the DOWN-TRENDING pattern of:

- frequent higher volume DOWN days (serious selling) and
- frequent lower volume UP days (lack of commitment to the upward move).

### **NOW NOTICE A SHIFT IN the PRICE-VOLUME PATTERN AS THE MARKET SLOWED DOWN AND THEN STARTED RISING:**

- More consecutive rising days with higher volume (Nasdaq)
- A fresh upward move of 4 rising days in a row (Nasdaq)
- Those moves in the last week bring hope that this Uptrend is gathering steam AND it brings a concern that irrational exuberance may be driving this Uptrend.
- EITHER WAY – I am happy to ride this Uptrend until it dies... next week, next month or next year. **STAY TUNED!**

This “change in personality” is common when a Downtrend becomes an Uptrend.

**DISTRIBUTION DAYS:** >>> Scan across the volume over the last four weeks on a daily chart below. You will see almost all the tall volume bars (sticking up above their neighbors) are ... RED, showing higher volume on down days. T

### **HOW TO SEE DISTRIBUTION ON 2-COLOR CHARTS!**

Distribution action is easiest to see when you are on a chart with two color volume lines, usually red for falling price days and green (or blue) for rising days. The fastest way to get a sense of the accumulation/distribution going on in a stock or index is to swing your eyes across the volume bars – noting the color of the highest bars - the red volume bar indicates the price dropped that day. The taller bar indicates the volume was higher.

### **REMEMBER:**

**THE MARKET CONTINUES IN THE DIRECTION IT IS GOING,**  
**.....UNTIL IT DOESN'T !**

**With the Coronavirus spreading, it could be a... long,... cold... year!**

>>>>But be sure to watch each stock in your portfolio for additional distribution days to signal an exit point. See selling rules chapter of “How to Make Money in Stocks” by William O’Neil, founder of Investor’s Business Daily.

# THE ARMCHAIR INVESTOR TREND-FOLLOWING STRATEGY

*A Simple and Powerful Tool to Increase Your Returns*

## Armchair Investor Mantra:

- **Be IN the market** when it is going up
- **Be OUT of the market** when it is going down
- **Protect your portfolio** with 8% stops.

**The primary purpose of this Armchair Investor newsletter is to let you, the reader, earn bigger returns riding the trend of the market.**

By following the best (most reliable) market change signals, you can:

- **Get in the market near the bottom** of a new bull market
- **Exit the market near the top**, and
  - **Capture more of the gains**,
  - **Avoid more of the losses** and, thus
  - **Earn higher returns** than the “buy-and-hold” strategy recommended by many brokers and money managers!

### **Why a “Buy-and-Hold” strategy doesn’t work well:**

When the market has topped and starts to fall, do you really want to let your profits fade away as the market falls – sometimes for years? Of course not! Selling your uptrend position allows you to capture your gains and store them safely away in cash. What is the right time to exit? This newsletter will show you the market’s signal.

### **Most downtrends (also called corrections) fall faster than the uptrends rise.**

***I am not willing to sit in a sick, falling market and lose my hard earned gains!***

Cash is a safer position!

Here are the three signals I will give you in this newsletter for the three market conditions:

- **Uptrends:** When the market rises into an Uptrend, buy and hold the QQQ, a stock that rises with the general market.
- **Uptrend showing Weakness:** As a market Uptrend starts to fall, you will receive the signal to exit the QQQ and safely wait in cash.
- **Downtrends:** If the market continues down, you will receive a signal to buy the PSQ, a stock that rises while the market falls.

**FINALLY – For individual stocks:** Use these market signals to help you when buying individual stocks. You increase your likelihood of a successful stock purchase if you only buy stocks when the market is in an Uptrend. Lesson: Don’t fight the market trend!

**HOW CAN YOU CAPTURE THOSE  
GREAT MARKET GAINS SHOWN ABOVE?  
USE THE ARMCHAIR INVESTOR PLAN:  
*It's as easy as 1- 2- 3!***

**STEP 1:** Ride a rising market - hold the QQQ .

**STEP 2:** Protect your investments during a weakening Uptrend

**STEP 3:** Go to cash or PSQ in a falling market.

This newsletter will identify the market direction, (step 1, step 2 or step 3) and explain what you can do to grow and protect your portfolio.

---

**STEP 1: In an Uptrend, hold the QQQ, a Nasdaq100 ETF**

**Find the market direction diagnosis every night in this newsletter.**

- In the Uptrend, buy the QQQ the next morning if you don't yet have that position. This newsletter will alert you to the Uptrend signal! *The QQQ follows the ups and downs of the Nasdaq100, allowing you to grab the rises of an Uptrend.*
- With some additional positive action, you may decide to switch to the double QQQ ETF (QLD) or triple QQQ (TQQQ). I do not recommend these moves for the first time investor.

**Just in case protection:** When you receive your confirmation of the purchase, place an **8% STOP LOSS** order to protect your portfolio from a sudden market reversal (executing this sale is rare – I almost always sell when the market goes into “under pressure” or Downtrend – see Step 2 below). Your broker can help you set up this order.

**This upward ride is the most exciting part of trend-following – Ride the escalator up, up, up as the market rises. Exit when the market starts to show significant weakness (read this newsletter nightly!**

**Although not every Uptrend signal generates a positive return, most do.**

## **STEP 2: When the Uptrend slows down: “Uptrend under Pressure”**

“Uptrend under Pressure” is a **Warning Message** and means:

- The market is showing significant distribution (selling pressure.)  
**Investors should:**
  - **Be concerned about the strength of this Uptrend.**  
During an Uptrend under Pressure, this newsletter may move into CASH position to avoid possible losses.
  - **Check on the health of your investments each night!** Many investors do not buy new stock positions during this period due to higher failure rates.
- **From STEP 2, “Uptrend under Pressure,”** the market diagnosis will go one of two ways:
  - **Rise** with price and volume strength, and return to **Uptrend – (STEP 1)**, or
  - Continue to add more distribution days and **fall** into a **Downtrend (correction)**
- This is a time to pay attention to the market behavior.

## **STEP 3: When the market diagnosis goes to “Downtrend”**

**Capture much of the gains from the Uptrend by selling your Uptrend ETF position (QQQ, QLD or TQQQ) when the market diagnosis goes into Downtrend to capture much of the gains earned in Steps 1 & 2 above.**

**After exiting the Uptrend ETF, wait in cash** until the next Uptrend signal. More recent Downtrends have been short term and not tradable.

**The Uptrend has been years long and strong. The market is due for a long dive. I will invest in the PSQ (inverse QQQ) ETF which makes profits as the market falls!**

**NOTE: Not every market direction signal ends with a positive return.** But overall, this Market Tracking Strategy has outperformed the market when traded according to these signals.

**BONUS:** Plus the market direction signals will help you by indicating when it is most effective to consider adding individual stocks to your portfolio (with a strong uptrending market).

## **DO YOU INVEST IN INDIVIDUAL STOCKS?—**

**Always consider taking some profit if significant distribution is showing up for your individual stocks.** However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

To get a deeper sense of the health of the market, look at the **MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**

**To schedule a class visit: Contact Charlotte Hudgin at 214-995-6702**

One of the reasons I pay so much attention to the Investor's Business Daily strategies and books (*How to Make Money in Stocks* series) is that they work consistently.

## **Visit an ARMCHAIR INVESTOR CLASS**

We have 3 live classes given each week in Dallas. These classes will be given **ONLINE** until we are cleared to meet in person. **Visit any class this week and next as my guest (2 free visits!).**

Register at the [Armchair Investor Meetup class site](#) to join the class you are interested in. Click on one of the links below to register. I occasionally take off for a class (or a week of them) for my own education or fun. If that is the case, those days will not be available for registration on Meetup.

- [Introduction to 5- minute investing Sundays 7 – 8 p.m.](#)
- [Monday nights 7 – 9 p.m.](#)
- [Tuesday afternoons 2:30 – 4:30 p.m.](#)
- [Wednesday mornings 10:00 a.m. to noon](#)
- All Classes meet ONLINE (during this “stay at home” time).
- Online classes and consultations available by appointment – **Call me for a FREE introduction!**

**Newsletter readers get a FREE class visit:**

Monday evening, Tuesday afternoon or Wednesday morning online.  
Register on Meetup.com or call or text me to set up your visit.

**Pre-REGISTRATION REQUIRED FOR YOUR FREE VISIT**

Just Call or Text me: 214-995-6702

**CALL EARLY: Guest Seating is limited.**

## WHAT HAPPENED LAST WEEK? (Updated on Friday newsletters)

LAST WEEK'S MARKET ACTION			
10/2/20	Weekly Index % Change	Weekly Volume % Change	Volume Above/ Below 10-week Avg
Nasdaq	+1.5%	-2.2%	-2.0%
S&P 500	+1.5%	NYSE 500	Volume
DJIA	+1.9%	-9.8%	-4.0%

### A DAY-TO-DAY LOOK AT THE NASDAQ LAST WE/EK:

**The prior week:** The key to understanding the current market is to step back and look at the week as a whole. What do you see? The whole week had only one day with higher volume (Wednesday) and that was a minor accumulation

### >>>>>> Is the Nasdaq running out of steam? <<<<<<<

Look at the day-to-day price action over last week (below).

The week ended with a total rise of 1.5% for the Nasdaq (a nice gain!)

LAST WEEK'S DAILY MARKET ACTION						
	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	FOR THE WEEK
	9/28	9/29	9/30	10/1	10/2	
Nasdaq	+1.9%	-0.3%	+0.7%	+1.4%	-2.2%	+1.5%
Volume	-7.3%	-4.0%	+24.0%	-4.4%	-6.4%	
	Neither	Neither	Minor accumulation	Neither	Neither	

You might feel the Uptrend is back!..... But something is MISSING!

And the missing piece is the other half of the market action equation – the VOLUME!  
*Notice the weakness in the daily price-volume action below.*

- Not ONE rising day (Monday, Wednesday or Thursday) had higher volume! (That missing piece showed a lack of support for the rises.)
- The only day that had higher volume was Wednesday's minor accumulation day. Considering the huge volume but small price move, I should not have been fooled into calling the uptrend reversal! At least not yet.

A Major Accumulation Day:	Price <b>RISES</b> 1.0% or more with higher Volume than prior day.
A Major Distribution Day:	Price <b>FALLS</b> 1.0% or more with higher Volume than the day before.
A Minor accumulation Day:	Price <b>RISES</b> at least 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).
A Minor distribution Day:	Price <b>FALLS</b> at least 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).
A Neither day:	Price/volume action does not meet accumulation or distribution criteria (a lower volume day and/or a day that did not rise or fall more than 0.2%.

# NASDAQ Daily 4 month chart, (updated Friday 10/2/2020)

Nasdaq fell down to its 50-day moving average line again, a traditional support line.

# NASDAQ Weekly 1 year chart, (updated Friday 10/2/2020)

Index rises off low to its 10-week moving average line.

These charts from StockCharts.com, a valuable site for investors with many free tools

## S&P500 Daily 4 month chart, (updated Friday 10/2/2020)

S&P500 rises to 50-day line which is now resistance.

## S&P500 Weekly 1 year chart, (updated Friday 10/2/2020)

Index hits a new low for 4<sup>th</sup> week closing at its 50-day m.a. line

These charts are from StockCharts.com, a valuable site for investors with many free tools

<b>MARKET ACTION 2020 YEAR-TO-DATE</b>			
<b>10/6/20</b>	<b>2019 Closing Price</b>	<b>Current Price</b>	<b>Index % Change Year-to-Date</b>
<b>Nasdaq</b>	<b>8972.61</b>	<b>11154.60</b>	<b>+24.3%</b>
<b>S&amp;P 500</b>	<b>3230.78</b>	<b>3360.97</b>	<b>+4.03%</b>
<b>DJIA</b>	<b>28538.44</b>	<b>27772.76</b>	<b>-2.7%</b>
<small>This yearly table is included for your reference. These returns have little relevance to trend-following returns since trend-followers do not hold during "Downtrends" and may lighten their holdings during "Uptrends under Pressure."</small>

Wishing you "**Many Happy Returns,**"

Charlotte Hudgin, 214-995-6702, Editor, the Armchair Investor

**DISCLAIMER, "Buyer Beware" WARNING:**

This newsletter shares the ideas I use in my investing.  
 It is not investing advice but should be taken as education only.  
 Your investment decisions are your responsibility as are the results.  
 If you are not comfortable with or do not understand a strategy completely,  
 I recommend that you paper-trade until you are successful and can sleep well at night.

**Call me to explore your investing questions!**

**Charlotte Hudgin, 214-995-6702**

**See additional definitions on the following pages....**

**EXAMPLE** of the DAILY MARKET ACTION table  
with explanation of terms and signals:

THE DAILY MARKET ACTION						
9/27/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13/2019 UPTREND SIGNAL
Nasdaq	7,939.63	-1.1%	+8.5%	-11.0%	Major Distribution	+1.7%
S&P500	2,961.79	-0.5%	NYSE Volume		minor distribution	+3.4%
DJIA	26,820.25	-0.3%	+5.1%	-12.0%	minor distribution	+3.8%

A **Major Accumulation Day**: Price RISES 1.0% or more with higher Volume than the day before.  
A **minor accumulation Day**: Price RISES 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).  
A **Major Distribution Day**: Price FALLS 1.0% or more with higher Volume than the day before.  
A **minor distribution Day**: Price FALLS 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).  
If the day's price/volume action does not meet the accumulation or distribution definitions above, it is a **neither day**.

\*\* The **Recent Trend Gains/Losses** column calculates how far each index has moved from the recent trend change assuming you purchased the index (in an Uptrend) or sold the index (in a Downtrend) at the opening price on the day after the signal. Although not every year outperforms the common "buy and hold" strategy, using these signals has significantly OUTPERFORMED the buy-and-hold strategy in total since 1/1/2000.

**Why are my Final Volumes Sometimes Different than Yours?** Why do the volume numbers on this table not always match other web sites? The 4:00 close of the market immediately shows an accurate final price. But the volume figures continue to trickle in for hours. At some time, the accumulation of volume numbers has to be cut off and different sites use different cut-offs. Also, some sources include the volume of stocks listed on one exchange but traded on another (e.g. Apple stock listed on Nasdaq but also traded on other exchanges.) And some sources do not. The most important rule is to consistently use only one source for volume.

**EXAMPLE and DEFINITIONS used in this newsletter:**

<b>DAILY MARKET ACTION</b>						
10/25/19	Index Close	Index % Change	Volume % Change	Volume vs 50-day Avg.	Accumulation or Distribution Day?	Recent Trend Gain/Loss from 8/13 UPTREND SIGNAL
Nasdaq	8,243.12	+0.70%	+1.2%	-2.1%	Neither	+5.3%
S&P500	3,022.55	+0.41%	NYSE Volume		Neither	+5.3%
DJIA	26,958.06	+0.57%	-9.2%	-1.5%	Neither	+4.3%
<p>A <b>Major Accumulation Day</b>: Price RISES at least 1.0% or more with higher Volume than prior day.</p> <p>A <b>minor accumulation Day</b>: Price RISES at least 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).</p> <p>A <b>Major Distribution Day</b>: Price FALLS at least 1.0% or more with higher Volume than the day before.</p> <p>A <b>minor distribution Day</b>: Price FALLS at least 0.2% and less than 1% with strong Volume (either higher than the day before or is well-above average volume).</p> <p>If the day's price/volume action does not meet the accumulation or distribution definitions above, it is a <b>"Neither" day</b>.</p>						
<p><b>Why are my Final Volumes Sometimes Different than Yours?</b> Why do the volume numbers on this table not always match other web sites? The 4:00 p.m. close of the market immediately shows an accurate final price. But the volume figures continue to trickle in for hours. At some time, the accumulation of volume numbers has to be cut off and different sites use different cut-offs. Also, some sources include the volume of stocks listed on one exchange but traded on another (e.g. Apple stock listed on Nasdaq but also traded on other exchanges.) And some sources do not. The most important rule is to consistently use the same source for your volume.</p>						

## **DO YOU INVEST IN INDIVIDUAL STOCKS?—**

**Always consider taking some profit if significant distribution is showing up for your individual stocks.** However, many individual stocks are rising with gusto! Look at all the lists in the Investor's Business Daily newspaper for stocks breaking out with high volume. **They are there!**

**To get a deeper sense of the health of the market, look at the MARKET FACTORS, COUNTS & RATINGS table** included each day in the FULL Armchair Investor newsletter. It looks at 7 key market direction factors and highlights the leaning of each:

- If the factor leans toward the **Uptrend**, that box will be **green**
- If the factor leans toward the **Downtrend**, that box will be **orange** or **red**
